Hoofdstuk 1

Inleiding

1.1 Voor de lezer

Wil je jouw ontwikkelingsproces voor een innovatief product efficiënt uitvoeren? Wil je potentiële kostbare problemen na de marktintroductie van een innovatief product vermijden?

Het tijdig gebruiken van informatie uit octrooien is nuttig om je te helpen technische en zakelijke beslissingen te nemen tijdens het ontwikkelingsproces en om potentiële problemen na de marktintroductie te voorkomen.

Om je te helpen deze informatie te vinden, geeft dit document een inleiding in de theoretische achtergrond van het zoeken in octrooidatabanken. Deze achtergrond helpt jou om in de praktijk de relevante documenten te kunnen vinden.

Het is nuttig voor zowel de beginnende als de meer ervaren onderzoeker in octrooidatabanken om inzicht te krijgen in de achtergronden van de keuzes die bij het zoeken gemaakt moeten worden. Deze keuzes moeten gemaakt worden om efficiënt te kunnen zoeken en de vragen van een onderzoek met voldoende kwaliteit te kunnen beantwoorden.

Het wordt niet verwacht dat een beginnende onderzoeker alle achtergrond-informatie direct begrijpt. Het zal daarom nuttig zijn om dit document te herlezen op een moment dat er meer ervaring is opgedaan.

Met zoekervaring en de informatie in dit document zou je octrooidocumenten efficiënt moeten kunnen vinden en de zoekvragen met voldoende kwaliteit moeten kunnen beantwoorden.

1.2 Wat is zoeken?

Tegenwoordig gebruikt iedereen zoekmachines op internet, zoals Google, om informatie te vinden. Deze zoekmachines hebben algoritmes om de meest relevante resultaten als eerste te presenteren. Voor veel alledaagse vragen is dit voldoende.

Het vinden van vooral technische informatie voor onderzoek en ontwikkeling vraagt om resultaten die voldoende compleet zijn en waarvan de omvang en diepgang van deze informatie bij aanvang niet bekend is. Deze resultaten zijn zeer moeilijk te realiseren met de manier waarop de zoekmachines op internet werken.

De basiskennis, die benodigd is om deze informatie voor onderzoek en ontwikkeling te vinden in de octrooidatabanken, wordt behandeld in hoofdstuk 2. Deze basiskennis geeft je de mogelijkheid om uit de enorme hoeveelheid octrooidocumenten een werkbare selectie te maken.

Een eerste overzicht van het zoekproces ziet er als volgt uit:

De eerste stap van zoeken is:

Selecteren van een werkbare hoeveelheid octrooidocumenten uit de totale enorme hoeveelheid octrooidocumenten.

De tweede stap is:

Selecteren van relevante documenten uit deze eerste selectie.

De moeilijkste stap is:

Weten wanneer je klaar bent.

1.3 Relevante informatie

De te beantwoorden vragen, die in het proces van onderzoek en ontwikkeling ontstaan, bepalen welke informatie relevant is. Het definiëren van deze vragen en relevante informatie wordt in andere handleidingen, zoals de handleiding voor analyses van octrooilandschappen, behandeld.

De benodigde relevante informatie is van grote invloed op een succesvol resultaat, maar heeft meestal weinig invloed op de methode van het zoeken. De beschreven basiskennis is daarom op vele zoekvragen van toepassing.

Hoofdstuk 2

Basis

2.1 Inleiding

Weten welke informatie je nodig hebt is cruciaal om te kunnen beginnen met zoeken. Daarom worden in paragraaf 2.2 eerst de belangrijkste criteria geïntroduceerd om de kwaliteit en efficiëntie van een zoekopdracht te definiëren.

Vervolgens wordt het proces van het definiëren en vinden van relevante documenten beschreven in paragraaf 2.3 en paragraaf 2.4

Als je de belangrijkste criteria kent en weet welke resultaten nodig zijn, kun je een set documenten selecteren in paragraaf 2.5 en weten wanneer de zoekopdracht kan worden voltooid in paragraaf 2.6.

2.2 Volledigheid en nauwkeurigheid

Volledigheid en nauwkeurigheid zijn belangrijk voor de beoordeling van het zoekproces, omdat de kwaliteit en de efficiëntie van het zoekproces belangrijk zijn. Hoewel de volledigheid moeilijk te meten is, kan het toch worden gebruikt om de kwaliteit van jouw zoekproces te begrijpen.

In de praktijk is een 100% volledigheid en tegelijkertijd een 100% nauwkeurigheid niet mogelijk. Het zoekproces is daarom altijd een afweging tussen efficiëntie en kwaliteit.

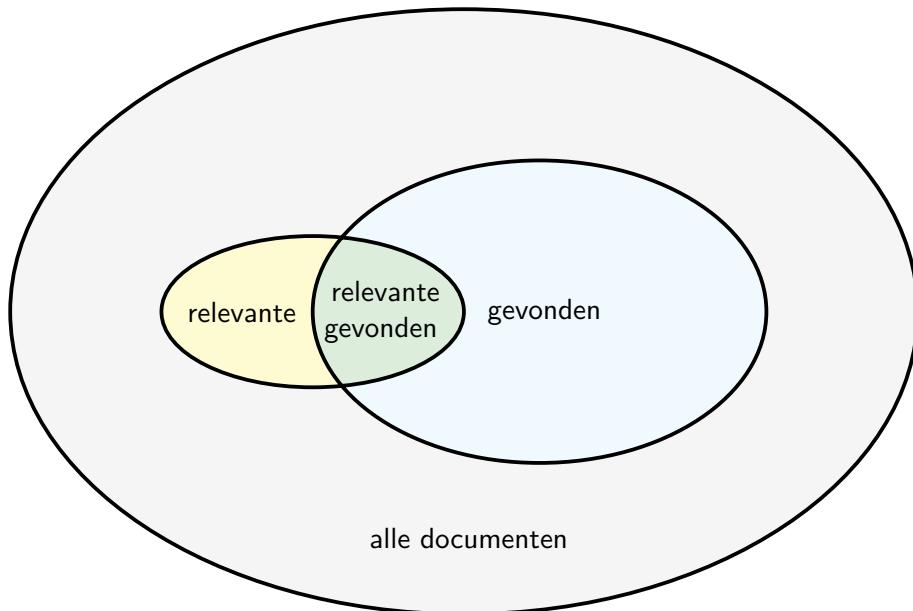

Volledigheid is gedefinieerd als: verhouding van gevonden relevante documenten en alle relevante documenten.

$$\text{volledigheid} = \frac{\text{gevonden relevante documenten}}{\text{alle relevante documenten}}$$

Nauwkeurigheid is gedefinieerd als: verhouding van gevonden relevante documenten en alle gevonden documenten.

$$\text{nauwkeurigheid} = \frac{\text{gevonden relevante documenten}}{\text{alle gevonden documenten}}$$

De verzamelingen documenten die voor beide criteria worden gebruikt, zijn weergegeven in figuur 2.1.

Figuur 2.1: De verzamelingen van documenten zoals gebruikt in de criteria voor volledigheid en nauwkeurigheid

Een goede kwaliteit van het zoekproces is in veel gevallen van belang. Bij bijvoorbeeld productontwikkeling is het van belang dat jouw vragen over de octrooi-informatie voor jouw ontwikkeling volledig worden beantwoord. Het missen van een relevant document kan leiden tot onnodige ontwikkelingen of tot het niet kunnen verkopen van een product. Dit kan ernstige financiële gevolgen hebben.

De volledigheid is daarom een goed criterium om de kwaliteit van het zoekproces te beoordelen. Normaal gesproken kan de gehaalde volledigheid alleen worden geschat door het zoekproces opnieuw uit te laten voeren door een andere persoon. Het is dus geen criterium waarmee eenvoudig de kwaliteit van het zoekproces kan worden beoordeeld. In de volgende paragrafen wordt beschreven hoe je met het volledigheidscriterium kan werken.

De efficiëntie van een zoekproces heeft een belangrijk effect op de kosten van het zoekproces. Voor het beoordelen van de efficiëntie kan het nauwkeurig-

heids criterium worden gebruikt. Dit kan eenvoudig worden gemeten nadat het zoeken is voltooid door het totaal aantal geselecteerde documenten te vergelijken met de relevante documenten. Deze vergelijking heeft op zichzelf vrijwel geen waarde. Bij het vergelijken van verschillende zoekprocessen of met collega's kan deze vergelijking wel worden gebruikt om de efficiëntie te beoordelen. Ook in de volgende paragrafen wordt het gebruik van dit criterium beschreven.

Over het algemeen werken volledigheid en nauwkeurigheid in tegengestelde richtingen: naarmate de volledigheid verbetert, neemt de nauwkeurigheid af, en naarmate de nauwkeurigheid toeneemt, neemt de volledigheid af. Tijdens het zoeken zul je voor jezelf een keuze moeten maken over deze balans. Het grote probleem hierbij is dat je normaal gesproken niet de volledigheid van jouw zoekproces weet. Ervaring met zoeken helpt om deze balans beter in te schatten. Dit wordt ook duidelijk gemaakt in de volgende paragrafen.

Voor meer informatie over volledigheid en nauwkeurigheid, zie bijvoorbeeld wikipedia.

2.3 Relevante resultaten definiëren

Voordat je met zoeken begint, moet je een duidelijk beeld hebben van wat de relevante resultaten moeten zijn. De relevante resultaten worden bepaald door de vragen die in het onderzoek beantwoord moeten worden.

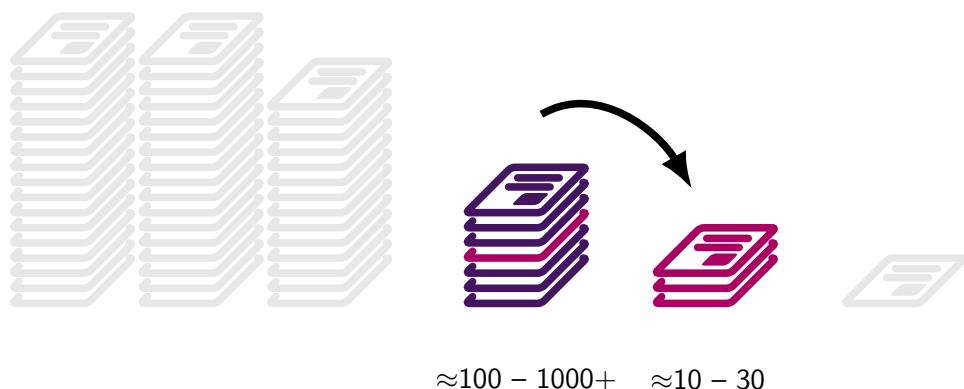

Voor een examiner bepalen de claims van de octrooiaanvraag hoe relevant de gezochte documenten zijn. Dit is een relatief duidelijk criterium om te gebruiken bij de selectie van de documenten. Als je onderzoek doet naar technische oplossingen is het criterium om documenten te selecteren minder duidelijk, omdat je vaak zoekt naar concepten of alle oplossingen voor een bepaald probleem. Wat in dit geval helpt, is het bepalen van een kenmerk of enkele kenmerken die in een document aanwezig moeten zijn om relevant te zijn. Hierdoor kan je snel mogelijke relevante documenten selecteren.

Een andere belangrijke reden om een duidelijke definitie van de relevante resultaten te hebben, is dat je hiermee kunt bepalen waar je *niet* naar moet zoeken. Als het mogelijk is om bepaalde technische gebieden of toepassingen uit te sluiten, zal dit het aantal documenten verminderen (en de nauwkeurigheid vergroten).

2.4 Een verzameling verwerken

Nadat je hebt gedefinieerd wat relevante resultaten zijn, kan je beginnen met het selecteren van de relevante documenten.

Vaak is het lastig om snel te bepalen of een document echt relevant is. Om dit te bepalen moet je normaal gesproken het document lezen. Te veel documenten lezen is niet mogelijk in een beperkte tijd. Daarom selecteer je in eerste instantie mogelijk relevante documenten uit een werkbare verzameling documenten (zie figuur 2.2). Je selecteert mogelijk relevante documenten door gebruik te maken van jouw criterium voor het selecteren van deze documenten zoals beschreven in de vorige paragraaf.

Figuur 2.2: Een verzameling verwerken; eerste selectie

Bij deze eerste verwerking is het normaal gesproken niet nodig om de documenten te lezen. Vaak is het voldoende om de afbeeldingen te bekijken of de samenvatting (of eventueel ook een deel van de beschrijving) te lezen om te zien of een document wel of niet aan jouw criterium voldoet. Zo creëer je in de eerste verwerking een geselecteerde groep van mogelijk relevante documenten.

Wanneer de eerste verwerking is voltooid, is het tijd om de geselecteerde groep documenten nauwkeuriger te bekijken. Door de documenten te lezen, kunnen de echt relevante documenten worden gevonden (zie figuur 2.3). Deze documenten geven de antwoorden op de vragen van jouw onderzoek.

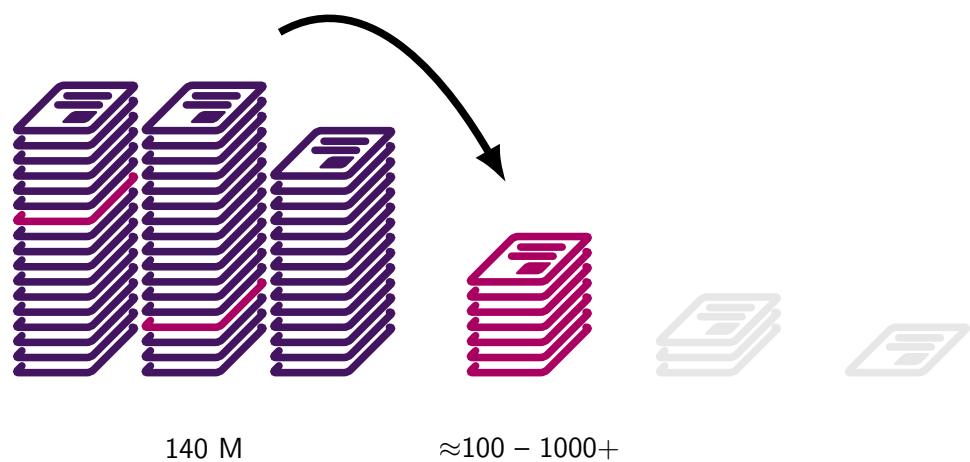

2.5 Verzameling selecteren

Het selecteren van een werkbare verzameling die alle relevante documenten bevat, is het belangrijkste onderdeel van een zoekopdracht. Dit is belangrijk omdat het een grote invloed heeft op de kwaliteit en de hoeveelheid werk (volledigheid en nauwkeurigheid). Zie figuur 2.4 om een indruk van het aantal documenten te krijgen.

In de vorige paragraaf is beschreven hoe je door de verzameling documenten werkt om uiteindelijk alleen de echt relevante documenten te selecteren. Dit is ‘slechts’ veel werk. Het selecteren van deze werkbare verzameling hoeft

Figuur 2.3: Een verzameling verwerken; tweede selectie; lezen om de echt relevante documenten te selecteren

Figuur 2.4: Verzameling selecteren

niet veel tijd te kosten, maar is wel het moeilijkste onderdeel van het zoeken naar informatie uit octrooien.

In de praktijk is het erg lastig om alle relevante documenten te selecteren (voor 100% volledigheid). Een werkbaar doel is daarom om zo dicht mogelijk bij 100% volledigheid te komen met een werkbare hoeveelheid documenten (hoge nauwkeurigheid). Dit deel geeft een introductie in de meest gebruikte methoden om dit doel te bereiken.

De huidige zoekmachines voor de octrooidatabanken beschikken over bepaalde functionaliteiten om een zoekopdracht uit te voeren. Deze mogelijkheden zullen in de volgende paragrafen worden toegelicht in relatie tot het bereiken van het doel om een werkbare verzameling met de relevante documenten te selecteren.

2.5.1 Tekst zoeken

De beschikbare zoekmachines zoals bijvoorbeeld Espacenet of Google Patents maken het zoeken naar woorden in de volledige tekst van de octrooi-documenten mogelijk. Het zoeken in de volledige tekst (ook wel full-text genoemd) maakt het mogelijk documenten te selecteren waarbij woorden kunnen worden gebruikt om de relevante kenmerken te beschrijven.

Normaal gesproken is het niet mogelijk om concepten te beschrijven, maar onderdelen of materialen kunnen wel met woorden worden beschreven. De mogelijke synoniemen van de woorden moeten ook worden gebruikt. Het is bijvoorbeeld niet ongebruikelijk dat in het chemisch gebied, waar stoffen normaal gesproken op een gestandaardiseerde manier worden beschreven, voor één stof wel 10 tot 20 synoniemen worden gebruikt.

Octrooien worden in vele talen gepubliceerd en moeten daarom mogelijk ook worden doorzocht met woorden uit de verschillende talen. In Espacenet kunnen alleen de drie officiële talen van het EOB worden gebruikt om te zoeken. In Google Patents kunnen ook andere talen worden gebruikt. Om de zoeker te ontlasten bij het vinden van synoniemen in de verschillende talen, worden in verschillende octrooidatabanken ook automatisch vertaalde teksten in het Engels gebruikt.

Ervaring met zoeken in de volledige tekst leert:

- Bepaalde relevante kenmerken kunnen goed worden beschreven met woorden, andere niet. Onderdelen, materialen of verbindingen zijn vaak wel goed te beschrijven, maar relaties daartussen zijn vaak niet te beschrijven.

Ook hebben niet alle talen woorden voor bepaalde kenmerken. Vaak bestaan er woorden voor een kenmerk in één taal, maar wordt hetzelfde kenmerk beschreven met meerdere woorden in een andere taal.

- De woorden en uitdrukkingen die in octrooidocumenten worden gebruikt, zijn vaak meer beschrijvend in plaats van specifiek, zodat ze een brede betekenis hebben. Daarom kan het lastig zijn om goede woorden voor het zoeken te vinden.
- Om een 100% volledigheid te benaderen moeten alle synoniemen in de verschillende talen gebruikt worden. Dit is vaak niet eenvoudig en vereist kennis en ervaring op het betreffende technische gebied.
- Het bereiken van een hoge volledigheid met alleen zoeken in de volledige tekst resulteert over het algemeen in een zeer lage nauwkeurigheid. Dit betekent dat er een onwerkbare verzameling documenten wordt geselecteerd.

2.5.2 Met classificatie zoeken

Examiners zoeken al meer dan een eeuw naar octrooien, ook in een tijd waarin computers nog niet beschikbaar waren om te zoeken. Om in deze tijd met alleen een papieren documentatie te kunnen zoeken, zijn octrooiclassificaties ontwikkeld. Het doel van deze classificaties is om verzamelingen documenten te vormen (met een specifieke classificatiecode) die in de buurt komen van de 100% volledigheid die nodig is voor search reports voor octrooiaanvragen en tegelijkertijd een hoge nauwkeurigheid hebben. Deze classificatie is nog steeds erg nuttig en wordt tegenwoordig nog veelvuldig gebruikt om zoekopdrachten uit te voeren.

De classificatiesystemen zijn daarmee afgestemd op de zoekopdrachten voor search reports bij octroibureaus. Om deze classificaties af te stemmen op de zoekopdrachten, bouwen en onderhouden dezelfde personen die zoeken (examiners) ook de classificatiesystemen en classificeren ze de documenten.

Veel octroibureaus hebben hun eigen classificatiesystemen ontwikkeld. Sinds de invoering van de International Patent Classification (IPC) heeft er enige standaardisatie plaatsgevonden. Een van de meest gebruikte classificaties naast de IPC is de Cooperative Patent Classification (CPC). In hoofdstuk 3 worden de kenmerken van de verschillende systemen beschreven.

Het gebruik van de juiste classificatiecode voor jouw zoekopdracht zorgt voor hoge volledigheid en hoge nauwkeurigheid. Dit heeft daarom de voorkeur om een werkbare verzameling te selecteren. Er moet echter aandacht worden besteed aan het vinden van de juiste classificatiecode, omdat het selecteren van een onjuiste code doorgaans resulteert in een volledigheid van nul.

Het vinden van de juiste code vereist zowel kennis van het technische vakgebied als van de classificatiecodes en hoe deze worden gebruikt voor classifi-

catie. Een algemene kennis van de classificatie wordt gegeven in hoofdstuk 3 en wordt aanbevolen om te lezen.

Bij classificatie is de selectie van een verzameling hetzelfde als:

het selecteren van de juiste classificatiecode.

2.5.3 Gespecialiseerde databanken voor specifieke technische vakgebieden

Voor bepaalde technische vakgebieden is het gebruik van full-text of classificatie niet voldoende om een zoekopdracht uit te voeren. Voor deze technische gebieden bestaan er gespecialiseerde zoekmachines en databanken.

Voor de chemie zijn er bijvoorbeeld zoekmachines en databanken waarin een chemische structuur kan worden gezocht.

In bijvoorbeeld de databank chemical abstracts van CAS kunnen sequenties worden gezocht.

2.5.4 Zoekopdrachten in de databanken

De meeste zoekmachines kunnen verschillende zoekopdrachten op een booleaanse manier combineren. Een Booleaanse combinatie betekent dat een logische **AND** of **OR** kan worden gebruikt om een zoekopdracht op te bouwen. Met een **AND** kan het resultaat worden beperkt tot een verzameling waarbij beide zoekopdrachten aanwezig moeten zijn. Met een **OR** kunnen meerdere alternatieven of synoniemen gecombineerd worden.

Een verzameling kan ook worden geselecteerd door bijvoorbeeld een classificatiecode en woorden te combineren. Daardoor wordt de nauwkeurigheid vergroot ten opzichte van een zoekopdracht met enkel een classificatiecode.

Zie de handleidingen en hulp van de zoekmachines voor de mogelijkheden (zie ook paragraaf B.2).

2.5.5 Ranking

Sommige zoekmachines voeren een ranking in Google-stijl uit op de resultaten, waarbij de resultaten met de hoogste ranking als eerste worden weergegeven. Dit is alleen nuttig als je snel wat resultaten wilt, maar niet nuttig voor een compleet resultaat omdat nog steeds alle documenten bekeken moeten worden.

Meer geavanceerde rankings zoals bijvoorbeeld facetzoeken (zie wikipedia) zijn op dit moment niet beschikbaar. Iets soortgelijks kan worden bereikt door booleaanse zoekopdrachten te herhalen, maar dit is niet erg gebruikersvriendelijk om uit te voeren.

2.5.6 Geciteerde en citerende documenten

De informatie uit search reports van de octrooiaanvragen is voor een groot deel beschikbaar in de databases van de verschillende zoekmachines. Deze informatie is een waardevolle bron voor relevante documenten:

De search reports van octrooiaanvragen bevatten relevante documenten voor de uitvindingen in die aanvragen.

Neem daarom de geciteerde documenten van reeds gevonden relevante documenten op in jouw selectie en controleer vooral deze op relevantie.

In verschillende zoekmachines zijn ook de documenten beschikbaar die een verwijzing naar een bepaald document bevatten. Je dient deze citerende documenten naar een relevant document in jouw selectie op te nemen, om dezelfde reden als waarom de geciteerde documenten zijn opgenomen.

Naast de relevantie van deze geciteerde en citerende documenten kunnen ze ook tips geven om nieuwe selecties te maken. Uit deze documenten kunnen onbekende relevante classificatiecodes of woorden worden afgeleid.

2.6 Wanneer klaar?

De vraag wanneer je moet stoppen met zoeken kan je beantwoorden als de volgende vraag beantwoord kan worden:

Heb je alle relevante documenten geselecteerd?

Deze vraag kan alleen met onzekerheid worden beantwoord. In de praktijk is het niet mogelijk om te controleren of je alle relevante documenten hebt geselecteerd (volledigheid = 100%). In plaats daarvan kunnen enkele indicaties worden gebruikt om de vraag te beantwoorden.

- Als je voldoende kennis hebt van de classificatie en technologie van een bepaald technisch vakgebied (vergelijkbaar met een examiner), kan je één of een beperkt aantal classificatiecodes selecteren met grote zekerheid dat de meeste relevante documenten worden geselecteerd. Het selecteren van een verzameling met deze classificatiecodes en het doorwerken van deze verzameling is dan voldoende voor het zoeken. Hierna kan de zoektocht worden gestopt. Deze methode is daarom het meest eenvoudig.
- De verzameling die je hebt geselecteerd, moet een aanzienlijk aantal relevante of nauw verwante documenten opleveren. Is dit niet het geval, dan heb je waarschijnlijk een verzameling geselecteerd zonder de relevante documenten (volledigheid is laag).

- Wanneer het verwerken van geciteerde en citerende documenten van de echt relevante documenten geen nieuwe relevante documenten of technische vakgebieden oplevert, dan is dit een indicatie dat de meeste relevante documenten zijn gevonden.

Als je tot de conclusie komt dat jouw zoekopdracht nog niet volledig genoeg is, moet er een nieuwe selectie worden gemaakt. Hiervoor kan de informatie uit de eerdere resultaten worden gebruikt. Er kunnen bijvoorbeeld nieuwe classificatiecodes van relevante documenten worden gebruikt.

Hoofdstuk 3

Classificatie

3.1 Inleiding

Het gebruik van classificaties is bij het zoeken vaak de meest bruikbare methode. De juiste selectie van classificatiecodes vereist kennis van zowel de classificatiesystemen als hun toepassing in een specifiek technisch vakgebied. Dit hoofdstuk geeft echter slechts een inleiding in de classificatiesystemen. De toepassing in een specifiek vakgebied vereist vooral ervaring met zoeken in het specifieke vakgebied.

3.2 Soorten van classificatie

De classificatiesystemen die voor octrooidocumenten worden gebruikt, hebben al een lange geschiedenis. Dit heeft geresulteerd in verschillende, diverse en vergelijkbare systemen. Hoewel de meeste classificatiesystemen onafhankelijk en verschillend van elkaar zijn begonnen, is er de trend om meer vergelijkbare of gelijkwaardige systemen te gebruiken. Samenwerkingen tussen de octroobureaus is hiervan de aanleiding.

De meeste classificaties hebben een hiërarchische structuur, waarbij onderverdelingen steeds specifiekere details beschrijven. Een andere veelgebruikte structuur is het gebruik van een lijst met karakteriseringen van bepaalde aspecten, zoals deze bijvoorbeeld bij deep indexing wordt gebruikt. In de praktijk zijn de huidige classificatiesystemen gebaseerd op één van deze structuren, maar gebruiken ze tegelijkertijd ook de andere structuur.

De meest bekende classificatie is de International Patent Classification (IPC) die door alle leden van de WIPO wordt gebruikt. Dit is een hiërarchisch classificatiesysteem. Een voorbeeld van deep indexing is het classificatiesysteem F-term (File forming term) dat wordt gebruikt door het Japanse octroobureau (JPO).

De classificatiesystemen die deze twee structuren gebruiken, worden in de volgende paragrafen verder beschreven.

3.2.1 IPC soorten

De IPC is het classificatiesysteem van de WIPO en is door haar leden overeengekomen. Elk octrooidocument dat door een lid wordt gepubliceerd, heeft minimaal één IPC-classificatiecode.

Verschillende classificatiesystemen zijn gebaseerd op de IPC. Dit betekent dat deze classificatiesystemen dezelfde classificatiecodes hebben als de IPC met verdere onderverdelingen. Deze verdere onderverdelingen zijn er om het zoeken efficiënter te maken.

Bekende classificatiesystemen gebaseerd op de IPC zijn:

- Cooperative Patent Classification (CPC) wordt gebruikt en onderhouden door het EOB en de USPTO en wordt ook gebruikt door octrooi-bureaus in andere landen.
- File Index (FI) gebruikt door de JPO.
- Deutsche Klassifikation (DEKLA) gebruikt door het Duitse octrooi-bureau (DPMA).

Als hiërarchisch classificatiesysteem vereisen de IPC-type classificatiesystemen ten minste één classificatiecode. Een bepaalde code moet zo gedetailleerd mogelijk zijn. Dit betekent dat aan een document een code moet worden toegekend die zich op het laagst mogelijke niveau bevindt. Er kunnen meerdere codes aan één document worden toegewezen, maar de regels voor toewijzing zijn niet volledig consistent tussen de verschillende classificatiesystemen.

De IPC bestaat uit acht secties:

- A. Human Necessities
- B. Performing Operations, Transporting
- C. Chemistry, Metallurgy
- D. Textiles, Paper
- E. Fixed Constructions
- F. Mechanical Engineering, Lighting, Heating, Weapons
- G. Physics
- H. Electricity

Deze acht secties zijn verder onderverdeeld in:

- Class

- Subclass
 - * Group
 - Main group or subgroups

Als voorbeeld een classificatiecode voor een wasknijper met scharnierende delen: D06F55/02. Deze code bestaat uit de onderdelen:

Section	Class	Subclass	Group	Subgroup
D	06	F	55	02

De hiërarchische structuur met alleen de tekst van de specifieke kopteksten van dit voorbeeld is:

Section D:
Textiles, Paper

Class 06:
TREATMENT OF TEXTILES OR THE LIKE;
LAUNDERING; FLEXIBLE MATERIALS NOT
OTHERWISE PROVIDED FOR

Subclass F:
LAUNDERING, DRYING, IRONING,
PRESSING OR FOLDING TEXTILE
ARTICLES

Group 55:
Clothes pegs

Subgroup 02:
with pivoted
clamping
members

Om een betere indruk te krijgen van de hiërarchische structuur, zie de volledige lijst van de classificatie van D06F in paragraaf C.2.

In paragraaf 3.3 wordt uitgelegd hoe de documenten worden geklassificeerd. Deze kennis van classificatie is nodig om de juiste classificatiecodes te kunnen selecteren.

3.2.2 Deep indexing

Bij een index classificatiesystemen worden meerdere aspecten die in een document zijn geopenbaard geklassificeerd. De aspecten die gebruikt worden zijn bijvoorbeeld kenmerken van een oplossing, toepassing en probleem. Eén document heeft dus meerdere indexcodes.

Het idee achter het indexeren is dat de inhoud van een document nauwkeurig kan worden gedefinieerd door de meerdere aspecten en daardoor ook gemakkelijk kan worden teruggevonden.

Hoewel de CPC een hiërarchisch classificatiesysteem is, gebaseerd op de IPC, hebben sommige delen van de CPC ook een aanvullend index classificatiesysteem. Hieruit blijkt dat een classificatiesysteem geen zuiver hiërarchisch systeem of zuiver indexsysteem hoeft te zijn. Zie als voorbeeld de aanvullende indexcodes (D06F2100 codereeks) in de D06F CPC in paragraaf C.2.

De JPO gebruikt zowel de FI, een hiërarchisch systeem, als het F-term-systeem, een zuiver indexsysteem. Het F-term-systeem is een deep indexing classificatiesysteem: meerdere aspecten worden volledig geklassificeerd.

Voor wasknijpers is de juiste F-term 4L027. Deze F-term is echter leeg en wordt niet gebruikt. In de FI bestaat een gedetailleerd schema voor wasknijpers, wat waarschijnlijk de reden is dat een F-term schema voor wasknijpers niet nodig is.

Voor het technisch aangrenzende veld van was- en droogmachines bestaat een gedetailleerd F-term schema. In paragraaf C.1 is dit F-term schema 3B168 te zien. In dit voorbeeld kunnen meerdere aspecten worden geklassificeerd:

- AA type of washer and dryer
- AB method of washer and dryer
- AC types of washer and dryer for businesses
- AD clothes
- AE description of drawings
- BA purpose
- CE rotor, churning wing
- FA detergent, solvent and medicine
- JM features of control
- WA instrument for wash and a wash auxiliary implement
- WB putting-in, taking-out and a carrying means of the washing

Een document met een uitvinding over een wasmachine krijgt vanuit meerdere aspecten één of meerdere classificatiecodes:

- kenmerken van het type wasmachine en het proces in de A-aspecten,
- doel of opgeloste probleem in het B-aspect,
- extra kenmerken in de C-, F-, J- en W-aspecten, indien van toepassing.

Door de verschillende relevante F-termen in een zoekopdracht te combineren, kan een verzameling documenten worden geselecteerd. Bij deze deep indexing is het dus noodzakelijk om alle aspecten te classificeren, zodat een goede volledigheid mogelijk is. De aspecten die in het classificatieschema worden gekozen, zullen een grote invloed hebben op de nauwkeurigheid en volledigheid. Ook dit schema is gebouwd voor examiners bij het octrooibureau en past daarom mogelijk niet goed bij een onderzoeksverzoek.

Een voorbeeld van een commerciële indexclassificatie is het Derwent manual codes classificatiesysteem dat beschikbaar is in de Derwent World Patent Index (zie website: clarivate). Dit is een classificatiesysteem in eigendom van Derwent voor het zoeken in hun patentdatabank.

3.3 Eigenschappen

3.3.1 Inleiding

Om de juiste classificatiecode te kunnen kiezen en te kunnen kiezen welk classificatiesysteem gebruikt moet worden, moeten de kenmerken van de systemen voldoende duidelijk zijn. Dit deel van dit document heeft tot doel de belangrijkste kenmerken duidelijk te maken.

In de beschikbare databanken zijn een beperkt aantal classificatiesystemen beschikbaar. De meest gebruikte classificatiesystemen zijn de IPC en de CPC. Daarom worden vooral deze twee hier vergeleken, met enkele kleine uitstapjes naar enkele andere systemen.

3.3.2 Omvang van de geclasseerde documenten

Alle leden van de WIPO moeten hun octrooipublicaties classificeren met de IPC. Dit betekent dat vrijwel elke octrooipublicatie een IPC classificatiecode heeft.

Echter, de IPC werd in de jaren zeventig geïntroduceerd. Documenten gepubliceerd vóór deze introductie konden daarom niet met een IPC-code worden gepubliceerd. In sommige databanken, bijvoorbeeld Espacenet, is dit opgelost door oudere documenten een IPC-code toe te wijzen op basis van de beschikbare CPC-codes van het document.

De EOB en USPTO classificeren alleen de documenten uit de belangrijkste landen met CPC-codes. Documenten in een taal die geen officiële taal is bij deze octrooibureaus, worden tegenwoordig niet geklassificeerd door deze octrooibureaus. Documenten in de Japanse taal (zowel JP als WO) krijgen bijvoorbeeld geen CPC-codes. Hoewel niet ieder document is geklassificeerd met een CPC-code, is het aantal documenten met een CPC-code nog steeds enorm. Een snelle vergelijking op het moment van schrijven laat zien:

55 miljoen van de in totaal 158 miljoen documenten in de databanken van het EOB hebben een CPC-code toegewezen gekregen door het EOB of USPTO. In totaal hebben 70 miljoen documenten een CPC-code als de andere landen die CPC-codes toekennen, ook worden meegerekend. Vergelijk dit met de bijna 37 miljoen documenten die oorspronkelijk een IPC-code hebben gekregen.

Cijfers van andere classificatieschema's: bijna 16 miljoen documenten hebben een F-term, bijna 18 miljoen documenten hebben een FI-code. Voor een overzicht van de database bij het DPMA zie: [data coverage Depatisnet](#).

Verschillende landen (bijvoorbeeld China en Korea) gebruiken nu ook CPC-codes bij hun gepubliceerde documenten. Daarom kan worden verwacht dat de omvang van de CPC zal toenemen.

3.3.3 Wat en hoe wordt geklassificeerd?

In zowel de IPC als de CPC wordt de uitvinding altijd geklassificeerd. Dit betekent dat een document minimaal 1 classificatiecode heeft. Het is ook mogelijk om aanvullende informatie te classificeren die nuttig is bij het zoeken. Zo zijn meerdere classificatiecodes op een document mogelijk.

Over het algemeen wordt de meest gedetailleerde (laagste in de hiërarchie) classificatiecode gebruikt. Een andere veelgebruikte regel is dat voor de classificatie de eerste correcte plaats in het classificatieschema wordt gebruikt. Maar er zijn veel uitzonderingen. Zie voor alle uitzonderingen de toelichting in het classificatieschema en de CPC-definities.

Een zeer gedetailleerde handleiding over het gebruik van de IPC kan je vinden in de [Guide to the International Patent Classification \(2024\)](#). Het meeste van wat hierin geschreven staat, is ook van toepassing op de CPC. Dit is geen document dat makkelijk te lezen is. Houdt hiermee rekening voordat je het probeert te lezen.

In deze handleiding worden de algemene regels beschreven. Hoe in een specifiek technisch gebied met de CPC wordt geklassificeerd, kan anders zijn dan hoe algemeen wordt geklassificeerd. De informatie hoe in een specifiek

technisch vakgebied wordt geklassificeerd, kan worden gehaald uit de ‘notes’ in het classificatieschema en uit de definities. Zie bijvoorbeeld de definities van D06F in paragraaf C.3.

Vaak wordt de betekenis van een group of subgroup nader toegelicht in de definities. Indien bijvoorbeeld het verschil tussen wasknijpers (D06F55/00) en wasknijpers met pivoted clamping members (D06F55/02) niet duidelijk is, verduidelijken de afbeeldingen in de definities onder de kopteksten dit (zie pagina 121 van de definities in paragraaf C.3).

De CPC heeft meer subgroups (zie bijvoorbeeld de delen tussen accolades in paragraaf C.2) en daardoor kan de omvang van een selectie kleiner zijn vergeleken met het gebruik van IPC-codes. Normaal gesproken resulteert dit in een hogere nauwkeurigheid.

Naast meer subgroups heeft de CPC ook extra additional codes (de 2000-reeks in subgroups). Deze additional codes worden op verschillende manieren gebruikt, zoals als index of als verdere onderverdelingen. Een waarschuwing hierover: additional codes zijn vaak niet verplicht en dus mogelijk niet volledig. Controleer wat er in de opmerkingen en definities staat.

3.3.4 Wie classificeert en wanneer?

De IPC-codes worden toegekend door de examiner werkzaam bij het betreffende octrooibureau, aan een document dat wordt gepubliceerd. Hoewel er wordt gestreefd naar een consistente classificatie, kan worden verwacht dat er enige variatie bestaat in de codes die door de examiners van de verschillende octrooibureaus worden gegeven. Dit kun je zien door bijvoorbeeld de IPC-codes te vergelijken met CPC-codes op een document of door de IPC-codes op de documenten van de verschillende landen in een octroifamilie te vergelijken.

De CPC-codes worden toegekend door examiners bij het EOB of de USPTO. Deze examiners werken in een gespecialiseerd technisch vakgebied waar een beperkt aantal classifiers actief is. Dit resulteert in een betere eenduidigheid dan bij de IPC-codes.

De IPC-codes worden alleen toegekend wanneer het document wordt gepubliceerd en worden later niet bijgewerkt.

De CPC-codes die aan documenten zijn toegewezen, worden bijgewerkt wanneer er een fout wordt ontdekt of wanneer het classificatieschema wordt gewijzigd. De aan documenten toegekende codes zijn daarom normaal gesproken altijd actueel, waarbij de uitzonderingen beschreven zijn in het classificatieschema.

Voor de Dekla en de FI en F-term is de situatie vergelijkbaar met de CPC.

3.3.5 Een paar tips

Ervaring in het zoeken zal helpen om de classificaties correct te gebruiken. Wanhoop dus niet als de eerste keer niet goed gaat.

Controleer, door naar de geselecteerde documenten te kijken, of je de classificatie goed hebt begrepen. Verspil geen tijd met het doorzoeken van een verkeerde verzameling!

Als je niet kan vinden wat je zoekt, heb je een verkeerde selectie gemaakt. Ja, er bestaat voor alles een eerdere stand van de techniek (tenzij je een ontdekking hebt gedaan die de wereld verandert).

Bijlage A

Woordenlijst

B

BOIP

Benelux-Bureau voor de Intellectuele Eigendom. Het Benelux-bureau voor de Intellectuele Eigendom (in het Engels BOIP: Benelux Office for Intellectual Property, in het Frans: Office Benelux de la Propriété intellectuelle) registreert merken en modellen voor de Benelux. 29

C

CPC

De Cooperative Patent Classification is een classificatiesysteem dat het EPO en USPTO hebben opgesteld en dat meerdere landen inmiddels gebruiken. De CPC is gebaseerd op de IPC, maar heeft een verdere onderverdeling. 13, 18

D

DEKLA

Deutsche Klassifikation. De Duitse classificatie is gebaseerd op de IPC. Deze wordt gebruikt en onderhouden door het DPMA. 18

DPMA

Deutsches Patent- und Markenamt. Het Duitse octrooibureau is belast met het verlenen van octrooien en merken voor Duitsland. 18, 22, 29

E

EOB

Europees Octrooibureau. Het Europees Octrooibureau (in het Engels EPO: European Patent Office) is belast met het verlenen van de Europese octrooien volgens het Europees Octrooiverdrag (EOV). De hoofdvestiging in München met nevenvestigingen in Rijswijk, Berlijn en Wenen. 18, 22, 29

EOV

Europees Octrooiverdrag. In het Engels: European Patent Convention (EPC), Duits: Europäisches Patentübereinkommen (EPÜ), Frans: Convention sur le brevet européen (CBE). Een multilateraal verdrag dat het systeem definieert voor het verkrijgen van een Europees octrooi. Naast de artikelen en regels voor het verkrijgen van een octrooi, is het EOV ook de basis voor de Europese Octrooi Organisatie. Het Europees Octrooibureau (EOB) is belast met het verlenen van de Europese octrooien. 26

EUIPO

European Union Intellectual Property Office. Het European Union Intellectual Property Office registreert merken en modellen voor de gehele EU. Ook wel uniemarken en uniemodellen genoemd. 29

examiner

In het Nederlands onderzoeker of technisch onderzoeker genoemd. Deze persoon werkt bij een octrooibureau en heeft als hoofdtaak een octrooiaanvraag inhoudelijk te behandelen. Dit is vooral het search report opstellen en het octrooi verlenen. 9, 13

F

F-term

File forming term is een classificatiesysteem gebaseerd op indexering. Het wordt in Japan gebruikt. 17, 20

FI

File Index is een classificatiesysteem gebaseerd op de IPC. Deze wordt gebruikt in Japan. 18, 20

full-text

Een full-text databank bevat de volledige tekst van de documenten, niet alleen bibliografische gegevens of samenvattingen. 12

I

IPC

International Patent Classification is een classificatiesysteem dat alle landen gebruiken. Iedere publicatie van een octrooiaanvraag of een octrooi krijgt een IPC-classificatiecode. 13, 17, 18

J

JPO

Japan Patent Office. Het Japanse octrooibureau is belast met het verlenen van octrooien en merken voor Japan. 17, 18, 20, 29

O

Octrooicentrum Nederland

Octrooicentrum Nederland is de octrooiverlener voor Nederland. Het Octrooicentrum is een onderdeel van de Rijksdienst voor Ondernemend Nederland (RVO) en valt onder het Nederlandse ministerie van Economische Zaken en Klimaat. Het Octrooicentrum geeft ook voorlichting over het octrooisysteem en behartigt de belangen van Nederland in Europese en mondiale organisaties voor intellectueel eigendom.

29

R

rapport van het onderzoek naar de stand van de techniek

Dit rapport wordt opgesteld door het octrooibureau waar de octrooiaanvraag is ingediend. Bij de toetsing in de octrooiprocedure worden de nieuwheid en de inventiviteit beoordeeld aan de hand van de documenten in dit rapport. Het bevat daarom de meest relevante documenten voor de toetsing. 27

S

search report

In het Nederlands: rapport van het onderzoek naar de stand van de techniek. 13, 15

stand van de techniek

De stand van de techniek wordt gevormd door alles wat voor de dag van indiening van de octrooiaanvraag openbaar toegankelijk is gemaakt door een schriftelijke of mondelinge beschrijving, door toepassing of op een andere manier. 24

U

USPTO

United States Patent and Trademark Office. Het United States Patent and Trademark Office is belast met het verlenen van octrooien en merken voor de Verenigde Staten. 18, 22, 29

W

WIPO

World Intellectual Property Organisation. Wereldorganisatie voor intellectuele eigendom. WIPO is een gespecialiseerde organisatie van de Verenigde Naties. WIPO bestaat uit 193 lidstaten, en beheert 26 internationale verdragen. Het hoofdkwartier is in Genève. 17, 21, 29

Documenten

C.1 F-term 3B168

Theme code	3B168
Descriptions	ACCESSORY OF WASHING/DRYING MACHINE, COMMERCIAL WASHING/DRYING MACHINE, OTHER WASHING/DRYING MACHINE
FI coverage	D06F1/00-19/00;27/00-31/00;35/00-35/00@Z;41/00- 51/02;58/00-58/00@Z;58/10-58/18@Z; 59/00-60/00

AA00 TYPE OF WASHER AND DRYER

- AA01 . Drum typed washer
 - AA02 . . With drying function
 - AA04 . . Tilted rotation drum
 - AA05 . . Horizontal rotation drum
 - * AA06 . . Top-loading
- AA11 . Vertical washer
 - AA12 . . With drying function
 - AA13 . . Dryer separated from the washer (also classified in AA24)
 - AA15 . . With blade
 - AA16 . . Partial washing
- AA21 . Single-tub with single function
 - AA22 . . Washer (including washer only for washing or rinse)
 - AA23 . . Dewatering machine
 - AA24 . . Dryer

AA00 TYPE OF WASHER AND DRYER

- AA31 . Multi-tub (drum also means tub, not including impounding tub)
 - AA32 . . Double-tub
 - * AA33 . . . Combination of washing tub and dewatering tub
 - * AA34 . . . Combination of washing and dewatering tub, drying tub
 - AA38 . Combination of functions and productions other than washer and dryer
 - AA40 . Others
-

AB00 METHOD OF WASHER AND DRYER

- AB01 . Washing and rinsing method
 - AB02 . . Bubble cleaning
 - AB03 . . Air bubble
 - AB04 . . Super sound
 - AB05 . . Water-jet
 - AB06 . . Shower
- AB11 . Dewatering method (excluding centrifugal dewatering)
 - AB12 . . Press, squeezing roller
- AB21 . Drying method
 - AB22 . . Combined use of heating and dehumidification
 - * AB23 . . . Heat pump
 - AB24 . . Only using heat
 - AB25 . . Only using dehumidification
 - AB27 . . Only using blowing
 - AB29 . . Drying with exhausting (exhausting to the external)
 - AB30 . . Circulation drying, interior air recirculation
- AB31 . Dehumidification method (using dehumidification agents etc.)
 - AB32 . . Use of cooling medium
 - AB33 . . Water cooling
 - AB34 . . Air cooling

AB00 METHOD OF WASHER AND DRYER

- AB41 . Additional function
 - AB42 . . Sterilization, antibacterial, odor eliminating
 - * AB43 . . Dedicated devices
 - AB50 . Others
-

AC00 TYPES OF WASHER AND DRYER (FOR BUSINESSES ETC.)

- AC01 . Dry cleaning
 - AC02 . . Solvent circulation, collection
 - AC03 . . Stain removal
 - AC11 . Drying chamber
 - AC12 . . Bathroom
 - AC13 . . Room, closet
 - AC14 . . Drawer typed closet, large size cabinet
 - AC15 . . Small size cabinet
 - AC16 . . Folding type
 - AC21 . Coin laundry
 - AC22 . Cleaning plant
 - AC23 . Continuous and multi-step drum
 - AC24 . Tunnel drum
 - AC25 . Movable type (such as laundry vehicle etc.)
 - AC26 . Portable, floor types (such as portable washer etc.)
 - AC27 . Tub changing its position
 - AC30 . Others
-

AD00 CLOTHES (WASHED CLOTHES AND DRIED CLOTHES)

- AD01 . Type of clothes in the term of form
 - AD02 . . Japanese-style bedding
 - AD03 . . Shoes
 - AD04 . . Socks
 - AD06 . Size and quantity (largeness and thickness etc.)
 - AD07 . Type of clothes in the term of quality (such as fragile materials etc.)
 - AD08 . States of the clothes (tough stains etc.)
 - AD10 . Others
-

AE00 DESCRIPTION OF THE DRAWING

- AE01 . Drawing of the component (subdivisional places under CE)
 - AE02 . Drawing of partial enlargement (subdivisional places under CE)
 - AE03 . Panel surface, displaying surface
 - AE04 . Flow chart
 - AE05 . Block line
 - AE06 . Diagram of electrical circuit, wire connection
 - AE07 . Diagram of fluidic circuit, wire connection
 - AE11 . Graphs and sheet indicating characteristic and advantage
 - AE12 . . Time chart etc.
 - AE13 . . Angle and revolution
 - AE14 . . Electric and magnetic
 - AE20 . Others
-

BA00 PURPOSE

- BA01 . Prevention and measurement against accidents
 - BA02 . . Bodily injury
 - * BA03 . . . Injury
 - BA04 . . . Burn injury
 - * BA05 . . . Electrification
 - BA06 . . . Static electricity
 - BA08 . . Damage of clothes
 - * BA09 . . . Tangle, twist, shrinkage, crease of clothes
 - * BA10 . . . Re-contamination, color transfer, color change from other clothes or washing agents, contamination of original sources
 - BA12 . . Mechanical or electrical damages and trouble
 - * BA13 . . . Overload, overheat, burning damage
 - * BA14 . . . Electric leakage, short-circuit, loose connection
 - * BA15 . . . Unbalance
 - * BA16 . . . Incursion of foreign substance
 - BA18 . . Power failure
 - BA19 . . Freezing

BA00 PURPOSE

- BA22 . . Environment and sanitation
 - BA23 . . . Noise (noise reduction, noise filter, noise prevention etc.)
 - BA24 . . . Vibration
 - BA25 . . . Odor, vapor of solvent
 - BA26 . . . Contamination of drainage water and waste fluid
- BA28 . . Measurement against the incorrect operation and incorrect move
- BA29 . . Theft, unauthorized use
- BA32 . . Trouble of water and liquid
 - BA33 . . . Water tight (drip-proof, water-proof etc.)
 - BA34 . . . Abnormal states such as stoppage, water supply and drainage, overflow water
 - BA35 . . . Flying water
- BA37 . . Trouble of air
 - BA38 . . . Abnormal states such as stoppage, water supply and supply and drainage systems
- BA40 . . Improvement and measurement of alert
- BA41 . . Improvement of efficiency and quality
 - BA42 . . Save of water and solvent
 - BA43 . . Reduction of energy consumption, and power transmission loss
 - * BA44 . . Heat recovery and reuse of wasted heat
 - BA45 . . Brief of required hours of processes
 - BA47 . . Automation and energy saving
 - BA48 . . Improvement of operating performance
 - BA49 . . Improvement of visibility
 - BA50 . . Quality of appearance, design
 - BA52 . . Improvement of washing performance
 - BA53 . . Improvement of rinsing performance
 - BA54 . . Improvement of dewatering performance
 - BA55 . . Improvement of washing performance
 - BA56 . . Improvement of dust removing performance
 - BA57 . . Reduction of foaming, prevention of effect by foaming
 - BA58 . . Facilitation of foaming
 - BA59 . . Adaptation to the user's preferences

BA00 PURPOSE

- BA62 . . Improvement of quality of finished clothes
 - BA63 . . . Aroma
 - BA64 . . . Mangle
 - BA65 . . . Measurement against allergy
 - BA69 . . Improvement and measurement of alarm
 - BA70 . . . Time alert
 - BA72 . . Maintenance
 - BA73 . . . Automatic cleaning of components (including operation by users)
 - BA74 . . . Tub cleaning
 - BA75 . . . Drying of component and tub
 - BA76 . . . Self-diagnosis
 - BA78 . . Sterilization, antibacterial, odor eliminating
 - BA82 . . Improvement of reliability, accuracy, durability
 - BA83 . . Improvement of material, reduction of components, simplification of construction
 - BA84 . . Downsizing, space saving, arrangement of components inside the machines
 - BA85 . . Processing and molding methods
 - BA86 . . Improvement of assembly, inspection, diagnosis of failure, disassembly
 - BA87 . . Improvement of carriage and packaging
 - BA88 . . Installing and mounting
 - BA89 . . Storage
 - BA91 . . Cooperation with network
 - BA92 . . Cooperation with the other apparatuses
 - BA99 . . Others
-

CE00 ROTOR, CHURNING WING

- CE01 . Structure and form
 - CE02 . . Pump out vane
- CE03 . Spiral
 - CE04 . . A wing hole vacancy, a hollow with a cleaning window
 - CE05 . . Dimensional ratio, dimension, size and curvature

CE00 ROTOR, CHURNING WING

- CE11 . Attachment of wings to the axis
 - CE12 . Component detached and attached on wings
 - CE13 . Attached in addition to the central bottom of a tub
 - CE14 . Multiple wings (the subject matter which rotates independently)
 - CE20 . Others
-

FA00 DETERGENT, SOLVENT AND MEDICINE

- FA01 . Water-soluble detergent
 - FA02 . Organic solvent and inorganic solvent
 - FA03 . Mixture and switching
 - FA04 . Strengthening of detergent and solvent and additive
 - FA05 . Bleach
 - FA06 . Finishing agent, softening agent, spice, etc.
 - FA07 . Drying material
 - FA11 . Shape and form
 - FA12 . . Liquid
 - FA13 . . Solid
 - * FA14 . . Powder
 - FA16 . . Package type
 - FA18 . . Gas
 - * FA19 . . Steam
 - FA20 . Others
-

JM00 FEATURES OF CONTROL

- JM01 . Controlled system step, a rotation tub, the action of the drum, and an input
 - JM02 . Detection objects and a detection means
 - JM03 . Control
 - JM04 . Cooperation with the other apparatuses
 - JM10 . Others
-

WA00 INSTRUMENT FOR WASH AND A WASH AUXILIARY
IMPLEMENT

- WA01 . Wash container, a laundry basket, a bag
 - WA02 . Restroom tools
 - WA03 . Wash net, a wash sheet, a drying bag
 - WA04 . Waste picking net
 - WA05 . Roller for dewatering and a roller for extending
 - WA06 . Wash ball and a corded object
 - WA07 . Measuring cup
 - WA08 . Hanger and a drying place
 - WA09 . . Doll
 - WA11 . Using form
 - WA12 . . Used in a tub
 - * WA13 . . Floating in a tub
 - * WA14 . . Used by attaching to wings
 - WA16 . . Used by attaching to places other than the tub
 - WA18 . . Used independently
 - WA20 . Others
-

WB00 PUTTING-IN, TAKING-OUT AND A CARRYING MEANS OF
THE WASHING

- WB01 . Tub changing its position
 - WB02 . Chute
 - WB03 . Piston
 - WB04 . Jet water
 - WB05 . Dependent on a hand tool
 - WB11 . Conveyor system
 - WB12 . . Conveyance screw system
 - WB13 . . Conveyor belt
 - WB14 . . Hanging conveyor (hanger conveyor)
 - WB15 . . Roller conveyer
 - WB20 . Others
-

C.2 CPC classificatieschema D06F

CPC COOPERATIVE PATENT CLASSIFICATION

D TEXTILES; PAPER

TEXTILES OR FLEXIBLE MATERIALS NOT OTHERWISE PROVIDED FOR

D06 TREATMENT OF TEXTILES OR THE LIKE; LAUNDERING; FLEXIBLE MATERIALS NOT OTHERWISE PROVIDED FOR

D06F LAUNDERING, DRYING, IRONING, PRESSING OR FOLDING TEXTILE ARTICLES

NOTES

1. This subclass **covers**:
 - domestic or laundry dry-cleaning apparatus using volatile solvents;
 - domestic, laundry, or tailors' ironing or other hot- pressing of clothes, linen, or other textile articles.
2. This subclass **does not cover**:
 - apparatus for wringing, washing, dry-cleaning, ironing, or other hot-pressing of textiles in manufacturing operations, which is covered by subclasses [D06B](#), [D06C](#).
 - treatment of textiles by purely chemical means, which is covered by subclasses [D06L](#), [D06M](#).

WARNING

In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme.

Washing; Rinsing; Dry-cleaning		11/00	Washing machines using rollers, e.g. of the mangle type
1/00	Washing receptacles (of washing machines D06F 37/00, D06F 39/00)	13/00	Washing machines having receptacles, stationary for washing purposes, with agitators therein contacting the articles being washed (plungers or the like adapted for removable mounting on receptacles D06F 5/04)
1/02	. Wash-tubs; Supports therefor		. wherein the agitator has an oscillatory rotary motion only
1/04	. . the tub walls or bottom having corrugations		. wherein the agitator has an axial motion only
1/06	. Wash-boiler receptacles		. wherein the agitator has both rotary, e.g. oscillating rotary, motion and axial motion
1/08	. . with special means for water circulation by heat, e.g. fountain-washers	13/02	. wherein the agitator has a gyratory or orbital motion
1/10	. Covers; Handles	13/04	
1/12	. Racks or other rigid open containers of skeleton or like apertured construction supporting clothes in washing receptacles	13/06	
3/00	Hand rubbing apparatus (corrugated tub-walls D06F 1/04)	13/08	
3/02	. Rubbing boards	15/00	Washing machines having beating, rubbing or squeezing means in receptacles stationary for washing purposes (plungers or the like adapted for removable mounting on receptacles D06F 5/04; mangle-type washing machines D06F 11/00)
3/04	. Hand rubbers, e.g. gloves with corrugated surfaces		. wherein the articles being washed are squeezed by a flexible diaphragm or bag
5/00	Hand implements for washing purposes, e.g. sticks (hand rubbing appliances D06F 3/00)	15/02	
5/005	. {Receptacles for washing articles, e.g. hosiery, by shaking or squeezing}	17/00	Washing machines having receptacles, stationary for washing purposes, wherein the washing action is effected solely by circulation or agitation of the washing liquid
5/02	. Plungers, dollies, pounders, squeezers, or the like	17/02	. by pumps (D06F 17/04 takes precedence)
5/04	. . adapted for removable mounting on receptacles such as wash-tubs	17/04	. solely by water jets
5/06	. Grippers	17/06	. by rotary impellers
7/00	Washing devices adapted to be used independently of any particular receptacle, e.g. for removable mounting on wash-tubs, bath-tubs, or the like	17/08	. . Driving arrangements for the impeller
7/02	. of the rotary-impeller type	17/10	. . Impellers
7/04	. of the vibrator type	17/12	. solely by gases, e.g. air or steam, introduced into the washing liquid
7/06	. agitating the washing liquid by air		
9/00	Brushing-type washing machines		

18/00	Washing machines having receptacles, stationary for washing purposes, and having further drying means (control of washing or of washing and drying D06F 33/00, D06F 34/00; domestic laundry dryers D06F 58/00)	33/00	Control of operations performed in washing machines or washer-dryers (D06F 31/00 takes precedence; details of control systems therefor D06F 34/00; control of operations performed in domestic laundry dryers D06F 58/32)
19/00	Washing machines using vibrations for washing purposes		NOTE
21/00	Washing machines with receptacles, e.g. perforated, having a rotary movement, e.g. oscillatory movement (with receptacles serving both for washing and centrifugally separating water from the laundry D06F 23/00, D06F 25/00; programme control aspects D06F 33/00)	33/04	In this group, it is mandatory to add the indexing codes of groups D06F 2101/00 - D06F 2105/00 .
21/02	. about a horizontal axis	33/06	. non-electrically
21/04	. . within an enclosing receptacle	33/08	. . substantially mechanically
21/06	. about a vertical axis	33/10	. . substantially hydraulically
21/08	. . within an enclosing receptacle	33/30	. . substantially pneumatically
21/10	. about an inclined axis		Control of washing machines characterised by the purpose or target of the control (controlling processes of washer-dryers D06F 33/50)
21/12	. the receptacle having a wobbling motion	33/32	. Control of operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry
21/14	. with rubbing or beating means not secured to, or forming part of, the receptacle	33/34	. . . of water filling
		33/36	. . . of washing
		33/37	. . . of metering of detergents or additives
		33/38	. . . of rinsing
		33/40	. . . of centrifugal separation of water from the laundry
		33/42	. . . of draining
		33/43	. Control of cleaning or disinfection of washing machine parts, e.g. of tubs
23/02	. and rotating or oscillating about a horizontal axis	33/44	. . Control of the operating time, e.g. reduction of overall operating time
23/025	. . {with a rotatable imperforate tub}	33/46	. . Control of the energy or water consumption
23/04	. and rotating or oscillating about a vertical axis	33/47	. . Responding to irregular working conditions, e.g. malfunctioning of pumps (safety arrangements D06F 37/42)
23/06	. and rotating or oscillating about an inclined axis	33/48	. . Preventing or reducing imbalance or noise
23/065	. . {with a rotatable imperforate tub}	33/50	. Control of washer-dryers characterised by the purpose or target of the control
		33/52	. . Control of the operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry
		33/54	. . . of water filling
		33/56	. . . of washing
		33/57	. . . of metering of detergents or additives
		33/58	. . . of rinsing
		33/60	. . . of centrifugal separation of water from the laundry
		33/62	. . . of draining
		33/63	. . . of air flow, e.g. blowing air during the washing process to prevent entanglement of the laundry
		33/64 Unheated air
25/00	Washing machines with receptacles, e.g. perforated, having a rotary movement, e.g. oscillatory movement, the receptacle serving both for washing and for centrifugally separating water from the laundry and having further drying means, e.g. using hot air (control of washing or of washing and drying D06F 33/00, D06F 34/00; domestic laundry dryers D06F 58/00)	33/65	. . . of conditioning or finishing phases, e.g. for smoothing or removing creases
		33/68	. . . of the sequence of washing and drying operations
27/00	Washing machines with receptacles moving bodily, e.g. reciprocating, swinging	33/69	. . Control of cleaning or disinfection of washer-dryer parts, e.g. of tubs
29/00	Combinations of a washing machine with other separate apparatus in a common frame or the like, e.g. with rinsing apparatus	33/70	. . Control of the operating time, e.g. reduction of overall operating time
29/005	. {the other separate apparatus being a drying appliance}	33/72	. . Control of the energy or water consumption
29/02	. with liquid-extracting apparatus (with roller wringer D06F 45/12)	33/74	. . Responding to irregular working conditions, e.g. malfunctioning of pumps (safety arrangements for washing machines D06F 37/42)
31/00	Washing installations comprising an assembly of several washing machines or washing units, e.g. continuous flow assemblies	33/76	. . Preventing or reducing imbalance or noise
31/005	. {consisting of one or more rotating drums through which the laundry passes in a continuous flow}		

34/00	Details of control systems for washing machines, washer-dryers or laundry dryers	37/20	<ul style="list-style-type: none"> • Mountings, e.g. resilient mountings, for the rotary receptacle, motor, tub or casing; Preventing or damping vibrations
NOTE			
	In this group, it is mandatory to add the indexing codes of groups D06F 2101/00 - D06F 2105/00 .	37/206	<ul style="list-style-type: none"> • • {Mounting of motor}
34/04	• Signal transfer or data transmission arrangements	37/22	<ul style="list-style-type: none"> • • in machines with a receptacle rotating or oscillating about a horizontal axis
34/05	• • for wireless communication between components, e.g. for remote monitoring or control	37/225	<ul style="list-style-type: none"> • • • {Damping vibrations by displacing, supplying or ejecting a material, e.g. liquid, into or from counterbalancing pockets}
34/06	• Timing arrangements	37/24	<ul style="list-style-type: none"> • • in machines with a receptacle rotating or oscillating about a vertical axis
34/08	• Control circuits or arrangements thereof	37/245	<ul style="list-style-type: none"> • • • {Damping vibrations by displacing, supplying or ejecting a material, e.g. liquid, into or from counterbalancing pockets}
34/10	• Power supply arrangements, e.g. stand-by circuits	37/26	<ul style="list-style-type: none"> • Casings; Tubs
34/14	• Arrangements for detecting or measuring specific parameters	37/261	<ul style="list-style-type: none"> • • {Tubs made by a specially selected manufacturing process or characterised by their assembly from elements}
34/16	• • Imbalance	37/262	<ul style="list-style-type: none"> • • • {made of plastic material, e.g. by injection moulding}
34/18	• • Condition of the laundry, e.g. nature or weight	37/263	<ul style="list-style-type: none"> • • • {assembled from at least two elements connected to each other; Connecting or sealing means therefor}
34/20	• • Parameters relating to constructional components, e.g. door sensors	37/264	<ul style="list-style-type: none"> • • {Tubs provided with reinforcing structures, e.g. ribs, inserts, braces}

Expelling water from the linen; Smoothing by cold rolling

D06F

51/00	Apparatus for expelling or draining water from the linen, not provided for in the preceding groups	58/263	. . . {Gas heating equipment}
51/02	. by twisting	58/266	. . . {Microwave heating equipment}
		58/30	. Drying processes (controlling a series of operations in domestic laundry dryers D06F 58/32)
		58/32	. Control of operations performed in domestic laundry dryers (control of operations performed in washer-dryers D06F 33/50 ; details of control systems, e.g. for detecting or measuring specific parameters or for selection or indication of programs D06F 34/00)
			. . characterised by the purpose or target of the control
			. . . Control of operational steps, e.g. for optimisation or improvement of operational steps depending on the condition of the laundry
		58/36 of drying, e.g. to achieve the target humidity
		58/38 Control of the initial heating of the drying chamber to its operating temperature
		58/40 by unheated air
		58/42 of conditioning or finishing, e.g. for smoothing or removing creases
		58/44 Cleaning or disinfection of machine parts, e.g. of heat exchangers or filters
		58/45 Control of the operating time
		58/46 Control of the energy consumption
		58/48 Responding to irregular working conditions, e.g. malfunctioning of blowers
		58/50 Preventing or reducing noise
		58/52	
		59/00	Supports adapted to retain the shape of particular articles being dried, e.g. incorporating heating means (devices for retaining the shape of hats A42B 1/002)
		59/02	. for garments
		59/04	. . for gloves
		59/06	. . for stockings
		59/08	. for curtains, table cloths, or other articles of sheet form
		60/00	Drying not provided for in groups D06F 53/00 - D06F 59/00
			Ironing; Pressing
		61/00	Ironing machines using two or more co-operating pressing rollers
		61/02	. with two rollers
		61/04	. with three or more rollers one above the other
		61/06	. with successive pairs of rollers
		61/08	. with one central roller co-operating with a plurality of circumferential rollers
		61/10	. with two or more central rollers co-operating with a plurality of circumferential rollers
		63/00	Ironing machines having a roller or rollers coacting with a fixed or moving flat bed or table (coverings or pads D06F 83/00)
		63/02	. with two or more rollers co-acting with a fixed or moving flat bed or table
		65/00	Ironing machines with rollers rotating against curved surfaces
		65/02	. with one roller only
		65/04	. . the bed being urged against the roller by hand or foot
		65/06	. . the bed being urged against the roller by power

Ironing; Pressing	D06F
65/08 . . the roller being urged against the bed	71/30 . specially adapted for pressing seams (specially adapted for pressing particular garments or parts thereof D06F 71/18)
65/10 . . with two or more rollers co-operating with two or more curved surfaces	
67/00 Details of ironing machines provided for in groups D06F 61/00, D06F 63/00, or D06F 65/00 (coverings or pads for ironing or pressing members D06F 83/00)	71/32 . Details
67/005 . {Stands or cabinets}	71/323 . . {Protective devices, e.g. burn guards}
67/02 . Rollers; Heating arrangements therefor	71/326 . . {Arrangements for producing a sliding or ironing movement between the pressing elements in closed position}
67/04 . Arrangements for feeding or spreading the linen	71/34 . . Heating arrangements; Arrangements for supplying or removing steam or other gases
67/06 . Means for stripping the linen from the rollers	71/36 . . Pressing elements (for use in pressing particular garments or parts thereof D06F 71/18; coverings or pads therefor D06F 83/00)
67/08 . Beds; Heating arrangements therefor	71/38 . . Feeding arrangements (feeding by lateral movement of pressing elements D06F 71/08)
67/10 . Driving arrangements	71/40 . . Holders or stretchers for the article to be pressed
69/00 Ironing machines not otherwise provided for	73/00 Apparatus for smoothing or removing creases from garments or other textile articles by formers, cores, stretchers, or internal frames, with the application of heat or steam (combined with external pressure means D06F 71/00)
69/02 . using endless or other ironing or pressing belts or aprons	73/02 . having one or more treatment chambers
69/04 . with relatively-sliding flat surfaces	
71/00 Apparatus for hot-pressing clothes, linen or other textile articles, i.e. wherein there is substantially no relative movement between pressing element and article while pressure is being applied to the article; Similar machines for cold-pressing clothes, linen or other textile articles	75/00 Hand irons
71/02 . actuated wholly by hand or foot (D06F 71/08 takes precedence)	75/02 . Externally-heated hand irons; Hand irons internally heated by means other than electricity, e.g. by solid fuel, by steam
71/023 . . {with an upper movable pressing member and a lower fixed pressing member}	75/04 . . by pre-heated block
71/026 . . . {the upper movable member rotating about a fixed axis}	75/06 . . with means for supplying steam or liquid to the article being ironed (D06F 75/32 takes precedence)
71/04 . power-actuated (D06F 71/08 takes precedence)	75/08 . Hand irons internally heated by electricity
71/043 . . . {with an upper movable pressing member and a lower fixed pressing member (D06F 71/06 takes precedence)}	75/10 . . with means for supplying steam to the article being ironed (D06F 75/32 takes precedence)
71/046 . . . {the upper movable member rotating about a fixed axis}	75/12 . . . the steam being produced from water supplied to the iron from an external source
71/06 . . fluid-actuated	75/14 . . . the steam being produced from water in a reservoir carried by the iron
71/062 . . . {with an upper movable pressing member and a lower fixed pressing member}	75/16 the reservoir being heated to produce the steam
71/065 {the upper movable member rotating about a fixed axis}	75/18 the water being fed slowly, e.g. drop by drop, from the reservoir to a steam generator
71/067 {Fluid-control mechanisms for controlling the ironing pressure or the movement of the pressure member}	75/20 . . . Arrangements for discharging the steam to the article being ironed
71/08 . wherein one or more of the pressing elements is moved laterally between successive pressing operations	75/22 . . . with means for supplying liquid to the article being ironed (D06F 75/10 takes precedence)
71/10 . . by movement about a vertical axis	75/24 . . . Arrangements of the heating means within the iron; Arrangements for distributing, conducting or storing the heat
71/12 . . by movement about a horizontal axis	75/243 {using other than ohmic-resistance heating means, e.g. electrolytic or induction heating}
71/14 . . by a rectilinear movement	75/246 {using infrared lamps}
71/16 . having a pressing element or buck adapted to provide interior support for a garment to be pressed (D06F 71/18 takes precedence)	75/26 . . . Temperature control or indicating arrangements
71/18 . specially adapted for pressing particular garments or parts thereof	75/265 {Temperature indicating arrangements; Control knobs}
71/20 . . for pressing shirts	75/28 . . . Arrangements for attaching, protecting or supporting the electric supply cable
71/22 . . for pressing collars	75/30 . . . Hand irons of special external shape or form
71/24 . . for pressing cuffs	75/32 . . . Attachments for converting hand irons to steam irons
71/26 . . for pressing shoulders or necks	
71/28 . . for pressing sleeves, trousers, or other tubular garments or tubular parts of garments	75/34 . . . Handles; Handle mountings
71/285 {for pressing sleeves}	75/36 . . . Casings
71/29 Trousers	75/38 . . . Sole plates (D06F 75/20 takes precedence)
71/295 {the top portion of trousers}	

Ironing; Pressing		D06F
75/40	. Stands or supports attached to the iron	95/006 . . . {Bags for holding the laundry during washing (D06F 5/005 takes precedence)}
77/00	Arrangements for exerting pressure on, lifting, or guiding hand irons	95/008 . {Devices for keeping articles together during laundering, e.g. for keeping socks in pairs (D06F 95/004 takes precedence); Devices for protecting or shielding certain parts of the articles during laundering, e.g. button protectors}
77/005	. {using an electro-magnet or a permanent magnet in the iron or the ironing board}	
79/00	Accessories for hand irons	
79/02	. Stands or supports neither attached to, nor forming part of, the iron or ironing board	2101/00 User input for the control of domestic laundry washing machines, washer-dryers or laundry dryers
79/023	. . {with means for supplying current to the iron}	2101/02 . Characteristics of laundry or load
79/026	. . . {for cordless irons}	2101/04 . . Quantity, e.g. weight
79/04	. Stoves or other heating means specially adapted for heating irons externally	2101/06 . . Type or material
79/06	. Means, not forming part of the iron, for cooling the iron	2101/10 . Spin speed
81/00	Ironing boards (coverings or pads therefor D06F 83/00; kitchen cabinets with ironing boards movable outwards to a position of use A47B 77/10)	2101/12 . Washing temperature
81/003	. {with flat iron support}	2101/14 . Time settings
81/006	. {with fabric support or garment rack}	2101/16 . Target humidity for the drying process, e.g. very-dry cycles
81/02	. with collapsible underframe	2101/18 . Target temperature for the drying process, e.g. low-temperature cycles
81/04	. . with means for adjusting height	2101/20 . Operation modes, e.g. delicate laundry washing programs, service modes or refreshment cycles
81/06	. attachable to independent supports, e.g. walls	
81/08	. incorporating heating, steaming, or forced ventilation means	
81/10	. Top board elements	2103/00 Parameters monitored or detected for the control of domestic laundry washing machines, washer-dryers or laundry dryers
81/12	. Sleeve boards; Attaching means therefor	2103/02 . Characteristics of laundry or load
81/14	. Means for attaching covers	2103/04 . . Quantity, e.g. weight or variation of weight
83/00	Coverings or pads for ironing or pressing members	2103/06 . . Type or material
85/00	Independent elements for interposition between the article and the ironing or pressing surface	2103/08 . . Humidity
Other laundry apparatus or systems		2103/10 . . expressed as capacitance or resistance
87/00	Apparatus for moistening or otherwise conditioning the article to be ironed or pressed (apparatus for smoothing or removing creases from garments or other textile articles by formers, cores, stretchers or internal frames, with the application of heat or steam D06F 73/00 ; devices used in combination with a laundry dryer D06F 58/203)	2103/12 . . Temperature
89/00	Apparatus for folding textile articles with or without stapling	2103/14 . Supply, recirculation or draining of washing liquid
89/005	. {Manual folding devices, e.g. for folding bed sheets (D06F 89/02 takes precedence)}	2103/16 . Washing liquid temperature
89/02	. of textile articles to be worn, e.g. shirts	2103/18 . Washing liquid level
89/023	. . {of shirts}	2103/20 . Washing liquid condition, e.g. turbidity
89/026	. . . {Details, e.g. collar holders}	2103/22 . . Content of detergent or additives
91/00	Starching apparatus	2103/24 . Spin speed; Drum movements
93/00	Counting, sorting, or marking arrangements specially adapted for laundry purposes	2103/26 . Imbalance; Noise level
93/005	. {Marking arrangements}	2103/28 . Air properties
95/00	Laundry systems or arrangements of apparatus or machines; Mobile laundries (D06F 31/00 takes precedence)	2103/30 . . Pressure
95/002	. {Baskets or bags specially adapted for holding or transporting laundry; Supports therefor}	2103/32 . . Temperature
95/004	. . {Bags; Supports therefor}	2103/34 . . Humidity
		2103/36 . . Flow or velocity
		2103/38 . Time, e.g. duration
		2103/40 . Opening or locking status of doors
		2103/42 . related to filters or pumps
		2103/44 . Current or voltage
		2103/46 . . of the motor driving the drum
		2103/48 . . of the motor driving the pump
		2103/50 . related to heat pumps, e.g. pressure or flow rate
		2103/52 . related to electric heating means, e.g. temperature or voltage
		2103/54 . related to blowers or fans
		2103/56 . related to air ducts, e.g. position of flow diverters
		2103/58 . related to condensation, e.g. condensate water level
		2103/60 . related to auxiliary conditioning or finishing agents, e.g. filling level of perfume tanks
		2103/62 . . related to systems for water or steam used for conditioning or finishing

- 2103/64 . Radiation, e.g. microwaves
- 2103/66 . . for treatment of laundry otherwise than by drying,
e.g. using UV light
- 2103/68 . Operation mode; Program phase
- 2103/70 . Number of operational cycles

- 2105/00 Systems or parameters controlled or affected by the control systems of washing machines, washer-dryers or laundry dryers**
 - 2105/02 . Water supply

 - 2105/52 . Changing sequence of operational steps; Carrying out additional operational steps; Modifying operational steps, e.g. by extending duration of steps
 - 2105/54 . Changing between normal operation mode and special operation modes, e.g. service mode, component cleaning mode or stand-by mode
 - 2105/56 . Remaining operation time; Remaining operational cycles
 - 2105/58 . Indications or alarms to the control system or to the user
 - 2105/60 . . Audible signals
 - 2105/62 . Stopping or disabling machine operation

C.3 CPC definities D06F

D06F

LAUNDERING, DRYING, IRONING, PRESSING OR FOLDING TEXTILE ARTICLES

Definition statement

This place covers:

- Domestic or laundry dry-cleaning apparatuses using volatile solvents;
- Domestic, laundry or tailors' ironing or other hot-pressing of clothes, linen or other textile articles;
- Controlling or regulating domestic laundry dryers (cf. [D06F 58/30](#)).

The Indexing Codes [D06F 2101/00](#) - [D06F 2101/20](#) cover user input for the control of domestic laundry washing machines, washer-dryers or laundry dryers.

The Indexing Codes [D06F 2103/00](#) - [D06F 2103/70](#) cover parameters monitored or detected for the control of domestic laundry washing machines, washer-dryers or laundry dryers.

The Indexing Codes [D06F 2105/00](#) - [D06F 2105/62](#) cover systems or parameters controlled or affected by the control systems of washing machines, washer-dryers or laundry dryers.

Relationships with other classification places

This subclass does not cover treatment of textiles by purely chemical means, which is covered by subclasses [D06L](#) and [D06M](#).

Apparatuses for wringing, washing, dry cleaning, ironing or other hot-pressing of textiles in manufacturing operations are covered by [D06B](#) and [D06C](#).

A document should be classified in [D06F](#) if:

- It mainly relates to the treatment of home textiles, the treatment of other kinds of textiles should generally be classified somewhere else.
- It generally (but not always) relates to a domestic appliance for treating a textile article (the machine may however be coin-operated).

Exceptions to the rule at point (II) above are:

[D06F 31/00](#), [D06F 43/00](#), [D06F 47/00](#), [D06F 58/12](#), [D06F 67/04](#), [D06F 71/00](#), [D06F 89/00](#) ,
[D06F 93/00](#), [D06F 95/00](#) as well as their subgroups.

Applications regarding washing machine components like e.g. pumps, electric motors, electronic devices, displays per se, i.e. applications which claim the technical features of those components without describing any particular interaction between said components and the household appliance do not usually belong to [D06F](#), but to the general classification entry of their function per se.

The above-mentioned devices are mainly seen as "black boxes" connected to the appliance so as to interact with the appliance's operation.

For example, if an application relates to a jog dial, a display or a selector switch, there must be an interaction between said devices and the appliance itself in order to classify said application in [D06F 34/28](#) (the display or the switch should e.g. be mounted to the front panel and/or should e.g. be used for selecting a washing program).

A set of claims including a claim like "a household appliance comprising the device (e.g. a pump) according to claim 1" does only mean that a device according to claim 1 may be used in a household appliance (e.g. in a washing machine) and that the application may be classified in [D06F](#) only if there's a clear interaction between the component and the appliance's operation.

D06F (continued)

Relationships with other classification places

CPC - D06F - 2024.05

It is not to be automatically assumed that such applications belong to [D06F](#), nor that a household appliance should automatically be a washing machine or a dryer (a household appliance could e.g. be a stove, an oven, a refrigerator etc.).

References**Application-oriented references**

Examples of places where the subject matter of this place is covered when specially adapted, used for a particular purpose, or incorporated in a larger system:

Apparatus for blocking, pressing, steaming or stretching hats	A42C
---	----------------------

Treating textile materials by liquids, gases or vapors	D06B
Valves	F16K
Drying in general	F26B
Sensors	G01M
Electric motors	H02K

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Drum	Washing receptacle, rotating drum, washing drum or washing tub; the washing receptacle or drum is where the clothes are placed. Drums are generally perforated and are usually the rotating part of the washing machine, however, in D06F 13/00 and subgroups, D06F 15/00 and subgroups, D06F 17/00 and subgroups, D06F 18/00 and subgroups and D06F 19/00 and subgroups, the drum is always stationary.
Tub	Enclosing receptacle, external drum, external tub or fixed tub; the tub is the fixed part of the washing assembly, it contains the washing drum as well as the washing fluid; the tub is generally stationary and water-tight.
Washing assembly	Oscillating assembly, oscillating part or suspended part; it is generally composed by both the drum and the tub.
Lifter	Rib, elements mounted to a rotating drum and acting mainly on the clothes
Agitator:	Rotary and/or oscillating device mounted inside a stationary washing drum and acting mainly on the clothes
Impeller	Rotary devices mounted inside a stationary washing drum and acting mainly on the washing liquid

D06F 1/00

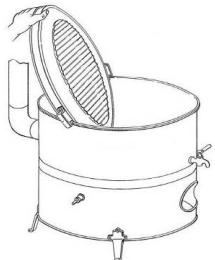

Washing receptacles (of washing machines [D06F 37/00](#), [D06F 39/00](#))

Definition statement

This place covers:

Washing receptacles suitable for hand washing (e.g. wash-up bowls).

Illustrative example of subject matter classified in this group.

References

Rubbing boards

[D06F 3/02](#)

D06F 1/06

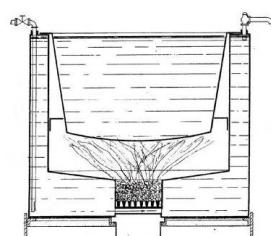

Wash-boiler receptacles

Definition statement

This place covers:

Wash-up bowls (generally made of metal) which can be heated by e.g. a gas burner.

Illustrative example of subject matter classified in this group.

D06F 1/08

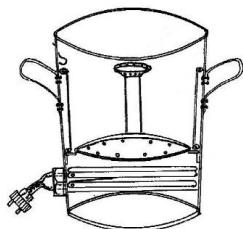

with special means for water circulation by heat, e.g. fountain-washers

Definition statement

This place covers:

Wash-up bowls (generally made of metal) comprising means for concentrating the heat of e.g. a burner and for applying it in such a way (e.g. to a hot water circuit), that steam within the boiler is quickly generated and, together with hot water, it is discharged on the garments to be washed.

Illustrative example of subject matter classified in this group.

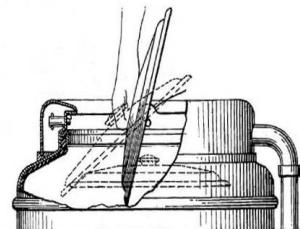

D06F 1/10

Covers; Handles

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 1/12

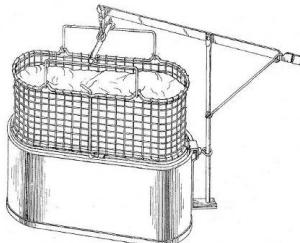

Racks or other rigid open containers of skeleton or like apertured construction supporting clothes in washing receptacles

Definition statement

This place covers:

Wire frame baskets or perforated metal containers suitable for supporting clothes in washing receptacles.

Illustrative example of subject matter classified in this group.

D06F 3/00

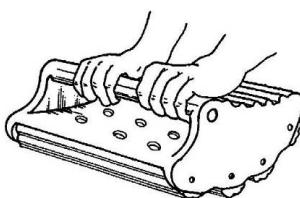

Hand rubbing apparatus (corrugated tub-walls [D06F 1/04](#))

Definition statement

This place covers:

Corrugated means against which the clothes are rubbed.

Illustrative example of subject matter classified in this group.

References

Limiting references

This place does not cover:

Wash-tubs with the tub walls or bottom having corrugations

[D06F 1/04](#)

Special rules of classification

Wash-up bowls incorporating a corrugated surface have to be classified in [D06F 1/04](#) only.

Rubbing boards have to be classified in [D06F 3/02](#) only.

D06F 3/02

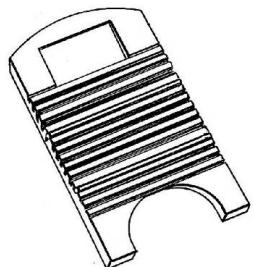

Rubbing boards

Definition statement

This place covers:

Corrugated boards against which the clothes are rubbed.

Illustrative example of subject matter classified in this group.

D06F 3/04

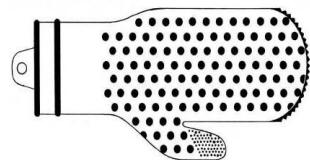

Hand rubbers, e.g. gloves with corrugated surfaces

Definition statement

This place covers:

Rubbing devices which are supposed to be used directly by hand.

Illustrative example of subject matter classified in this group.

D06F 5/00

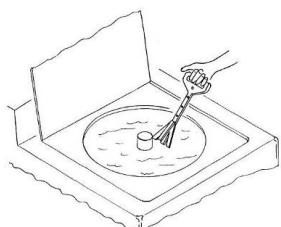

**Hand implements for washing purposes, e.g. sticks (hand rubbing appliances
D06F 3/00)**

Definition statement

This place covers:

Hand implements which are specifically designed for uniformly distributing/stirring the washing agent and/or the laundry in the washing tub.

Illustrative example of subject matter classified in this group.

D06F 7/00

Washing devices adapted to be used independently of any particular receptacle, e.g. for removable mounting on wash-tubs, bath-tubs, or the like

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 7/02

of the rotary-impeller type

Definition statement

This place covers:

Impellers or similar rotating bodies suitable for agitating the washing liquid.

Illustrative example of subject matter classified in this group.

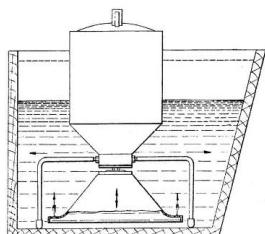

D06F 7/04
of the vibrator type

Definition statement

This place covers:

Washing devices, wherein the agitation of the washing fluid is generally obtained by oscillating e.g. a solid flat surface with a steady uninterrupted rhythm.

Illustrative example of subject matter classified in this group.

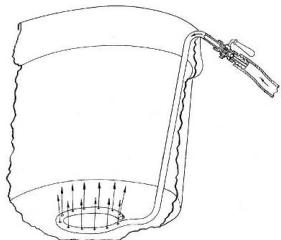

D06F 7/06
agitating the washing liquid by air

Definition statement

This place covers:

Washing devices, wherein the washing action is obtained by agitating the washing liquid using e.g. air jets.

Illustrative example of subject matter classified in this group.

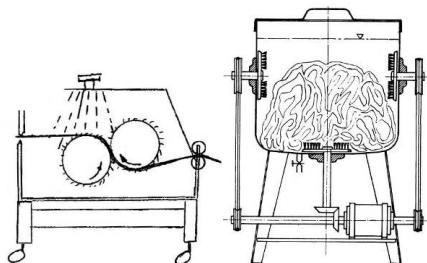

D06F 9/00
Brushing-type washing machines

Definition statement

This place covers:

Devices for washing home textiles comprising one or more brushing elements, wherein said brushing element comprises bristles hard enough to remove dirt but not so hard that they cause damage to the laundry.

Illustrative examples of subject matter classified in this group.

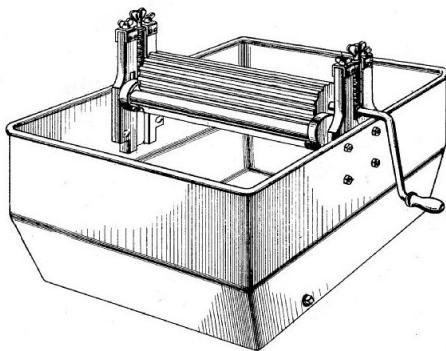

D06F 11/00

Washing machines using rollers, e.g. of the mangle type

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

This place covers:

Illustrative example of subject matter classified in this group.

D06F 33/30

Control of washing machines characterised by the purpose or target of the control (controlling processes of washer-dryers [D06F 33/50](#))

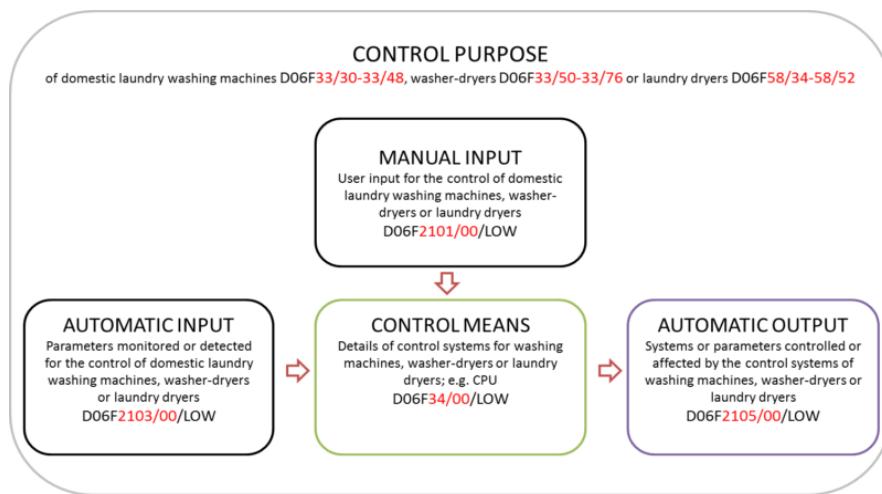

Definition statement

This place covers:

The controlling processes of washing machines that are classified in this group and its subgroups according to their specific purpose, e.g. the optimization / improvement of the washing phase or the prevention of imbalance or noise. The further information relating to the (manual and/or automatic) input and the output of these controlling processes is classified with the mandatory indexing codes and any details of the control means per se, i.e. the "hardware" is classified in the groups relating to the details of the control means (see special rules of classification for this group and its subgroups).

Concept

The following picture schematically illustrates how a controlling process of a washing machine, washer-dryer or laundry dryer is classified based on how it works. An input signal (i.e. a user input as "manual input" or an automatically detected signal as "automatic input", e.g. by a sensors) is fed into a control unit as "control means", which depending on the purpose of the control sends corresponding command signals to the machine components.

A controlling process for a laundry treating apparatus (e.g. a washing machine) has a specific "control purpose" and implies the presence of a "control means" (e.g. a CPU), whereby the control means is usually a control unit which comprises a user interface (e.g. a control panel) and several sensors for the automatic detection of e.g. temperature, pressure, liquid level, etc.

Moreover, the control unit is usually configured to perform actions as "automatic output" (e.g. switching a heater ON/OFF, regulating the drum speed, etc.), depending on the purpose of the control and based on the input of the user and/or the signals provided by the sensors.

Example: washing machine - control method

Control method for a washing machine employing a control unit adapted to detect the level and the temperature of the washing liquid and to switch the tub heater ON/OFF based on the laundry load, as input by the user, such as to reduce the energy consumption.

Classification of the example:

- Purpose: [D06F 33/46](#) (Control of the energy or water consumption)
- Manual input: [D06F 2101/04](#) (Characteristics of laundry or load – Quantity, e.g. weight)
- Automatic input: [D06F 2103/16](#) (Washing liquid temperature); [D06F 2103/18](#) (Washing liquid level)
- Automatic output: [D06F 2105/10](#) (Temperature of washing liquids; Heating means therefor)
- Note: The method of the present example essentially concerns the control of the machine per se and, as such, it should not be classified in the [D06F 35/00](#) area, which relates to methods focused on the treatment of the laundry.

Special rules of classification

It is mandatory to classify all relevant aspects related to: purpose, manual input, automatic input, automatic output and details of the control means.

- Purpose (washing machines) [D06F 33/30 - D06F 33/48](#)
- Manual Input [D06F 2101/00 - D06F 2101/20](#)
- Automatic Input [D06F 2103/00 - D06F 2103/70](#)
- Automatic Output [D06F 2105/00 - D06F 2105/62](#)
- Details of the Control Means [D06F 34/00 - D06F 34/34](#)

Note: The methods in the present area essentially concern the control of the machine per se; as such, they should not be classified in [D06F 35/005](#), [D06F 35/006](#) and [D06F 35/007](#), which relate to methods focused on the treatment of the laundry; however, in exceptional cases where both aspects are important, classification symbols belonging to both areas might be assigned.

It is noted that [D06F 35/005](#) and subgroups relate to methods for treating the laundry whereas [D06F 33/00](#) and subgroups relate to devices and methods for controlling the appliance.

D06F 33/32**Control of operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry****Definition statement**

This place covers:

The control of the individual operational steps or phases of a washing machine cycle.

D06F 33/50

Control of washer-dryers characterised by the purpose or target of the control

Definition statement

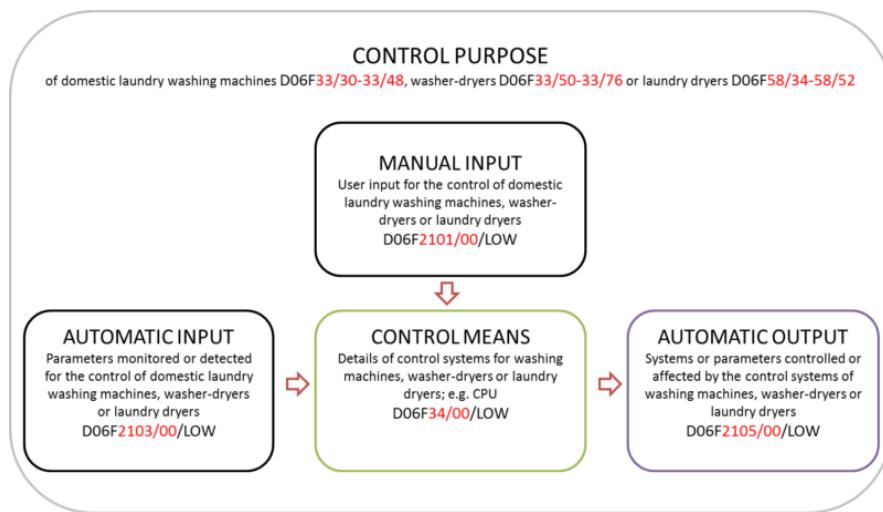

This place covers:

The controlling processes of washer-dryers that are classified in this group and its subgroups according to their specific purpose, e.g. the optimization / improvement of the washing phase or the prevention of imbalance or noise. The same classification rules set out for [D06F 33/30](#) also apply mutatis mutandis to [D06F 33/50 - D06F 33/76](#), as shown in the schematic picture below. It is noted that a symbol belonging to the aforementioned range should only be given in case the control process applies specifically to a washer-dryer, and would therefore not work for a washing machine or a laundry dryer.

The further information relating to the (manual) input and the output of these controlling processes is classified with the mandatory indexing codes and any details of the control means per se, i.e. the "hardware" is classified in the groups relating to the details of the control means (see special rules of classification for this group and its subgroups).

Concept

The following picture schematically illustrates how a controlling process of a washing machine, washer-dryer or laundry dryer is classified based on how it works: an input signal (i.e. a user input as "manual input" or an automatically detected signal as "automatic input", e.g. by a sensor) is fed into a control unit as "control means", which depending on the purpose of the control sends corresponding command signals to the machine components.

The preceding image makes reference to the following symbols: [D06F 33/30-D06F 33/48](#), [D06F 33/50-D06F 33/76](#), [D06F 58/34-D06F 58/52](#), [D06F 2101/00](#), [D06F 2103/00](#), [D06F 34/00](#), [D06F 2105/00](#).

Example: washer-dryer

Washer-dryer provided with a control circuit, a control panel, an air heater and a temperature sensor for measuring the temperature of the drying air, whereby the user interface allows the user to set the maximum temperature of the drying air and the control unit is configured to regulate both the heater (e.g. by switching it ON/OFF) and the blower fan based on the temperature of the drying air.

Moreover, according to the description, the control aims to avoid damaging the laundry by overheating.

Classification of the example:

- Purpose: [D06F 33/52](#) (Control of the operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry)
- Manual input: [D06F 2101/18](#) (Target temperature for the drying process, e.g. low-temperature cycles)
- Automatic input: [D06F 2103/32](#) (Air properties – Temperature)
- Automatic output: [D06F 2105/28](#) (Electric heating); [D06F 2105/30](#) (Blowers)
- Washer-dryers: [D06F 25/00](#)

Note: As a general rule, all washer-dryers are classified in [D06F 25/00](#).

References

Informative references

Attention is drawn to the following places, which may be of interest for search:

Washing machines with receptacles, e.g. perforated, having a rotary movement, e.g. oscillatory movement, the receptacle serving both for washing and centrifugally draining and having further drying means, e.g. using hot air	D06F 25/00
---	----------------------------

Special rules of classification

As a general rule, all washer-dryers are classified in [D06F 25/00](#).

It is mandatory to classify all relevant aspects related to: purpose, manual input, automatic input, automatic output and details of the control means.

- Purpose (washer-dryers) [D06F 33/50 - D06F 33/76](#)
- Manual Input [D06F 2101/00 - D06F 2101/20](#)
- Automatic Input [D06F 2103/00 - D06F 2103/70](#)
- Automatic Output [D06F 2105/00 - D06F 2105/62](#)
- Details of the Control Means [D06F 34/00 - D06F 34/34](#)

Note: The methods in the present area essentially concern the control of the machine per se and as such, they should not be classified in the [D06F 35/00](#) area, which relates to methods focused on the treatment of the laundry. However, in exceptional cases where both aspects are important, classification symbols belonging to both areas might be assigned.

D06F 33/52

Control of the operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry

Special rules of classification

for the classification in [D06F 57/00](#) and its subgroups:

- supporting means mounted on pillars ([D06F 57/02](#) and [D06F 57/04](#)) are not considered "stands". Hence, foldable supporting means mounted on pillars are not classified in the subgroups [D06F 57/08](#) or [D06F 57/10](#) relating to stands only;
- supporting means specially adapted for attachment to walls, ceilings, stoves, or other structures or objects ([D06F 57/12](#) and subgroups) are considered neither "mounted on pillars" nor "stands". Hence, such supporting means are only classified in [D06F 57/12](#) and subgroups even if foldable.

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Stand	Supporting means, other than simple clothes-lines, for linen or garments to be dried or aired, comprising more than one leg for standing on the ground and being self-supporting, i.e. without being mounted to the ground or a further support.
-------	--

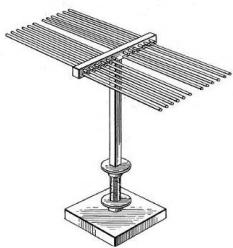

D06F 57/02

Attention is drawn to the following places, which may be of interest for search:

Drying in general	F26B
-------------------	----------------------

D06F 58/02

having dryer drums rotating about a horizontal axis

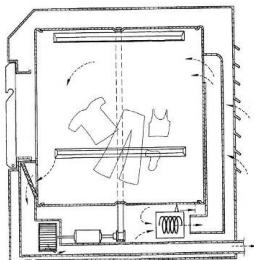

Definition statement

This place covers:

Domestic laundry drier having a drier drum rotating about a horizontal axis in general.

For instance: a domestic laundry drier having a drier drum rotating about a horizontal axis defined by a particular arrangement of conducting air inside the laundry drier, this particular arrangement involving inter alia the drum.

An example of such a domestic laundry drier in [D06F 58/02](#) is:

D06F 58/04

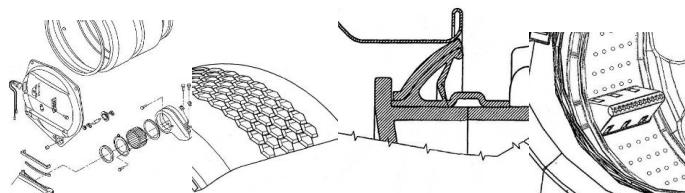

Details (controlling or regulating devices [D06F 34/00](#))

Definition statement

This place covers:

Details that are directly relating to the drier drum rotating about a horizontal axis of the domestic laundry drier.

Examples of such details of a domestic laundry drier in [D06F 58/04](#) include:

References

Limiting references

This place does not cover:

Controlling or regulating devices	D06F 34/00
-----------------------------------	----------------------------

Special rules of classification

In case an aspect of the detail falls also in [D06F 58/20](#) and its subgroups, i.e. this aspect of the detail is not restricted to laundry driers having a drum rotating about a horizontal axis, then also [D06F 58/20](#) or its relevant subgroup should be assigned.

For instance: a domestic laundry drier having a drier drum rotating about a horizontal axis and comprising an electric heating device specially shaped or adapted to the drier drum should be classified in both, [D06F 58/04](#) (aspect: specially shaped to the drier drum) and [D06F 58/26](#) (aspect: heating device).

D06F 58/06

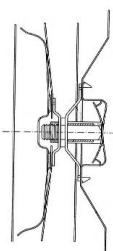

Mountings for the rotating drums

Definition statement

This place covers:

Any detail related to the mounting of the rotating drum, for instance bearings or supports of the rotating drum.

An example of a detail of a mounting for a rotating drum in [D06F 58/06](#) is:

D06F 58/08

Driving arrangements

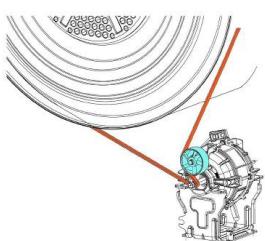

Definition statement

This place covers:

Device details or components of the domestic laundry drier directly related or linked to the driving arrangement of the drier drum.

For instance: the motor, mounting and support of the motor, as well as details of the drive system such as belts and pulleys.

An example of such a details of a driving arrangement in [D06F 58/08](#) is:

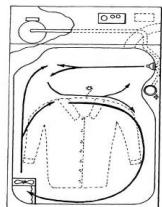

D06F 58/10

Drying processes (controlling a series of operations in domestic laundry dryers [D06F 58/32](#))

Definition statement

This place covers:

Laundry drying processes per se, i.e. machine working methods characterized by several laundry treating steps.

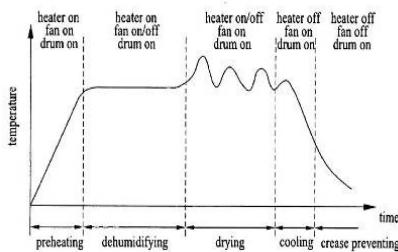

D06F 58/30 (continued)

Definition statement

CPC - D06F - 2024.05

It is noted that in this group the focus is set on the treating process the laundry undergoes.

Illustrative example of subject matter classified in this group.

The above diagram represents a typical drying method for laundry dryers, in which several laundry treating steps are performed, for example during the drying process the heater and the blower fan are subsequently turned ON/OFF while the drum is rotated.

D06F 58/32

Control of operations performed in domestic laundry dryers (control of operations performed in washer-dryers [D06F 33/50](#); details of control systems, e.g. for detecting or measuring specific parameters or for selection or indication of programs [D06F 34/00](#))

Definition statement

This place covers:

General control aspects that are not covered by [D06F 58/34 - D06F 58/52](#).

D06F 58/34

characterised by the purpose or target of the control

Definition statement

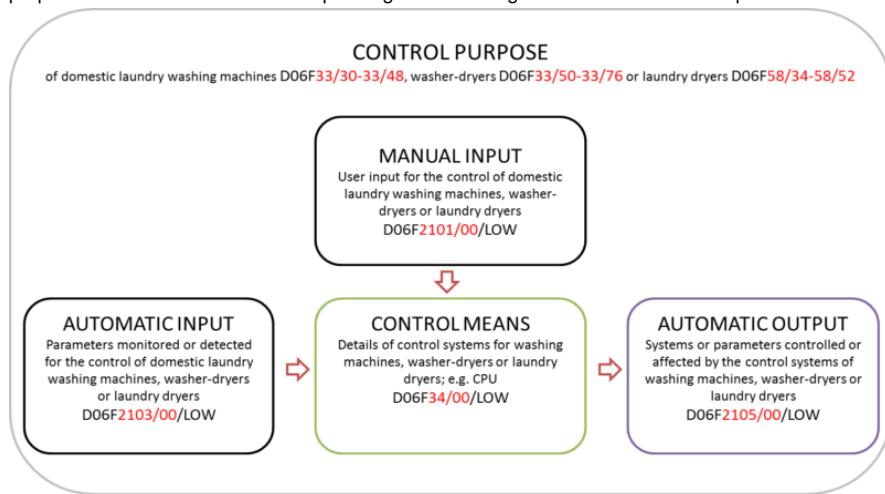

This place covers:

The controlling processes of laundry dryers that are classified in this group and its subgroups according to their specific purpose, e.g. the optimization / improvement of the drying phase or the prevention of laundry ignition.

The further information relating to the (manual) input and the output of these controlling processes is classified with the mandatory indexing codes and any details of the control means per se, i.e. the "hardware" is classified in the groups relating to the details of the control means (see special rules of classification for this group and its subgroups).

Concept

The following picture schematically illustrates how a controlling process of a washing machine, washer-dryer or laundry dryer is classified based on how it works. An input signal (i.e. a user input as "manual input" or an automatically detected signal as "automatic input, e.g. by a sensors) is fed into a control unit as "control means" which depending on the purpose of the control sends corresponding command signals to the machine components.

The preceding image makes reference to the following symbols: [D06F 33/30-D06F 33/48](#), [D06F 33/50-D06F 33/76](#), [D06F 58/34-D06F 58/52](#), [D06F 2101/00](#), [D06F 2103/00](#), [D06F 34/00](#), [D06F 2105/00](#).

A controlling process of a laundry treating apparatus (e.g. a laundry dryer) has a specific "control purpose" and implies the presence of a "control means" (e.g. a CPU), whereby the control means is usually a control unit which comprises a user interface (e.g. a control panel) and several sensors for the automatic detection of e.g. air temperature, laundry humidity, liquid level in the condensed water tank, etc.

Moreover, the control unit is usually configured to perform actions as "automatic output" (e.g. switching a heater ON/OFF, regulating the blower fan speed, etc.), depending on the purpose of the control and based on the input of the user and/or the signals provided by the sensors.

First example: laundry dryer - control method

Control method for a laundry dryer employing a control unit adapted to detect the temperature of the drying air and to switch the fan speed and the heater ON/OFF based on the target humidity of the laundry load, as input by the user, such as to reduce the operating time.

Classification of the example:

- Purpose: [D06F 33/70](#) (Control of the operating time)
- Manual input: [D06F 2101/16](#) (Target humidity for the drying process)
- Automatic input: [D06F 2103/32](#) (Air properties – temperature)
- Automatic output: [D06F 2105/28](#) (Electric heating); [D06F 2105/30](#) (Blowers)

Second example: washer-dryer

Washer-dryer provided with a control circuit, a control panel, an air heater and a temperature sensor for measuring the temperature of the drying air, whereby the user interface allows the user to set the maximum temperature of the drying air, and the control unit is configured to regulate the heater (e.g. by switching it ON/OFF) and the blower fan based on the temperature of the drying air. The control aims to avoid damaging the laundry by overheating.

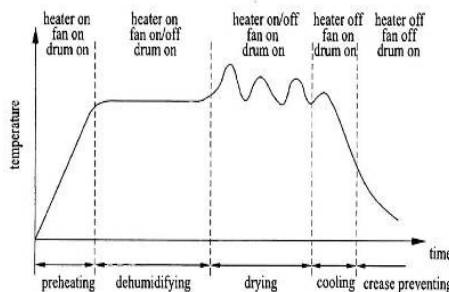

Classification of the example:

- Purpose: [D06F 33/52](#) (Control of the operational steps, e.g. optimisation or improvement of operational steps depending on the condition of the laundry)
- Manual input: [D06F 2101/18](#) (Target temperature for the drying process, e.g. low-temperature cycles)
- Automatic input: [D06F 2103/32](#) (Air properties – Temperature)
- Automatic output: [D06F 2105/28](#) (Electric heating); [D06F 2105/30](#) (Blowers)
- Note: All washer-dryers have to be also classified, as a general rule, in [D06F 25/00](#).

Special rules of classification

It is compulsory to classify also all relevant aspects related to the Purpose, Manual Input, Automatic Input, Automatic Output and Details of the control means.

- Purpose [D06F 58/34- D06F 58/52](#)
- Manual Input [D06F 2101/00- D06F 2101/20](#)
- Automatic Input [D06F 2103/00- D06F 2103/70](#)
- Automatic Output [D06F 2105/00- D06F 2105/62](#)
- Details of the Control Means [D06F 34/00- D06F 34/34](#)

The above diagram represents a typical drying method for laundry dryers, belonging to [D06F 58/30](#) in which, during the drying process, the heater and the blower fan are subsequently turned ON/OFF while the drum is rotated. It is noted that [D06F 58/30](#) relates to methods for treating the laundry

whereas [D06F 58/34](#) and subgroups relate to devices for controlling the appliance (i.e. the focus is set on the treating process the laundry undergoes).

D06F 58/36

Control of operational steps, e.g. for optimisation or improvement of operational steps depending on the condition of the laundry

Definition statement

This place covers:

The control of individual operational steps, which are focused on the condition of the laundry.

D06F 58/38

of drying, e.g. to achieve the target humidity

Definition statement

This place covers:

The control of individual operational steps, which are focused on the achievement of one or more target drying parameters.

D06F 58/40

Control of the initial heating of the drying chamber to its operating temperature

Definition statement

This place covers:

The control of individual operational steps, which are focused on the initial heating phase.

D06F 58/42

by unheated air

Definition statement

This place covers:

Control methods or control arrangements having the purpose of steering and/or optimizing the air flow, wherein the air is unheated.

D06F 58/44

of conditioning or finishing, e.g. for smoothing or removing creases

Definition statement

This place covers:

Control methods or control arrangements of laundry dryers having the purpose of conditioning or finishing the laundry, e.g. using a laundry-conditioning agent like water, steam, perfume, starch.

Any hand iron internally heated by electricity that cannot be classified in one of the lower subgroups of [D06F 75/08](#). This group comprises, for instance, illuminating devices.

Special rules of classification

Information regarding steam irons should not be classified in [D06F 75/08](#) itself (information regarding steam irons should be classified in [D06F 75/10](#) and/or lower)

D06F 75/10

with means for supplying steam to the article being ironed ([D06F 75/32 takes precedence](#))

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

References

Limiting references

This place does not cover:

Attachments for converting hand irons to steam irons	D06F 75/32
--	----------------------------

Informative references

Attention is drawn to the following places, which may be of interest for search:

Methods of steam generation, steam boilers	F22B
--	----------------------

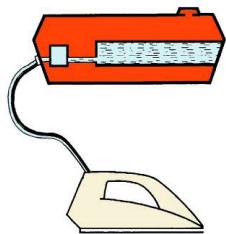

D06F 75/12

the steam being produced from water supplied to the iron from an external source

Definition statement

This place covers:

Hand irons having means for supplying steam, wherein steam or water for producing steam are supplied to the iron from an external source (e.g. an external steam generator or a water reservoir and pump).

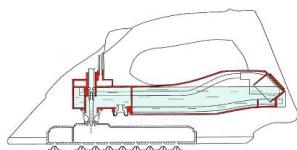

D06F 75/14

the steam being produced from water in a reservoir carried by the iron

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

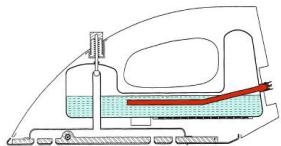

D06F 75/16

the reservoir being heated to produce the steam

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

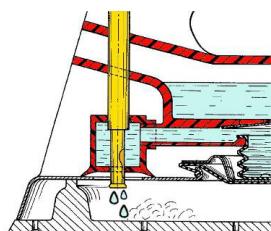

D06F 75/18

the water being fed slowly, e.g. drop by drop, from the reservoir to a steam generator

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

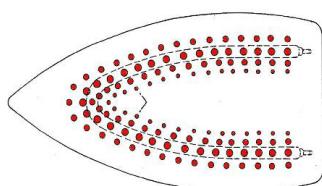

D06F 75/20

Arrangements for discharging the steam to the article being ironed

Definition statement

This place covers:

Steam outlets arrangements.

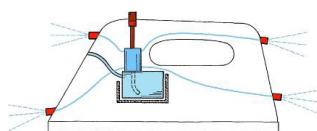

D06F 75/22

with means for supplying liquid to the article being ironed ([D06F 75/10 takes precedence](#))

Definition statement

This place covers:

Hand irons comprising water sprays.

{using other than ohmic-resistance heating means, e.g. electrolytic or induction heating}

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 75/246

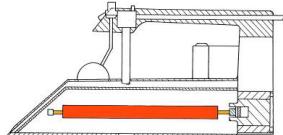

{using infrared lamps}

Definition statement

This place covers:

Any heating means using lamps or light sources for generating heat radiation, for instance:

- Heating means comprising infrared lamps;
- Heating means comprising sources of visible light;
- Heating means comprising sources of ultraviolet light.

D06F 75/26

Temperature control or indicating arrangements

Definition statement

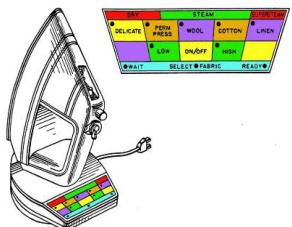

This place covers:

Temperature control or indicating arrangements for hand irons, including details for controlling or representing general displays, buttons, position detectors and thermostats of a hand iron.

D06F 75/265

{Temperature indicating arrangements; Control knobs}

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

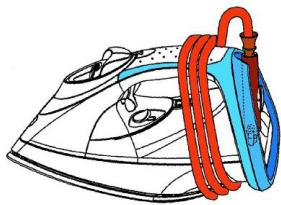

D06F 75/28

Arrangements for attaching, protecting or supporting the electric supply cable

Definition statement

This place covers:

Cable supports that are part of the hand iron.

D06F 75/30

Hand irons of special external shape or form

Definition statement

This place covers:

Hand irons having a special shape or use.

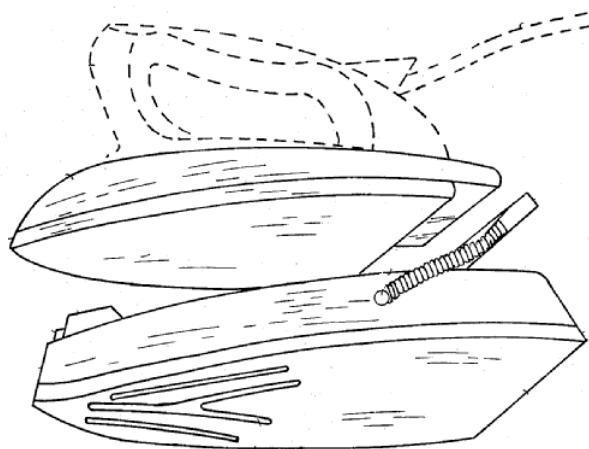

D06F 75/32

Attachments for converting hand irons to steam irons

Definition statement

This place covers:

Illustrative example of subject matter classified in this group:

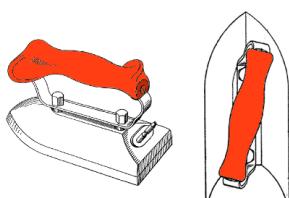

D06F 75/34

Handles; Handle mountings

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

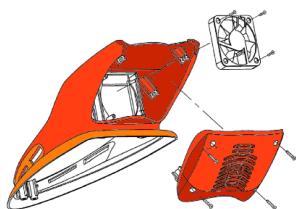

D06F 75/36

Casings

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 75/38

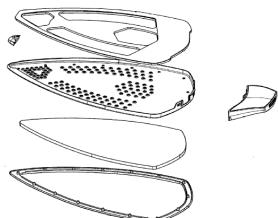

Sole plates ([D06F 75/20](#) takes precedence)

Definition statement

This place covers:

Construction details of fixed or removable soleplates (how the soleplate is built e.g. layers, materials etc.).

Illustrative example of subject matter classified in this group:

D06F 75/40

Stands or supports attached to the iron

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

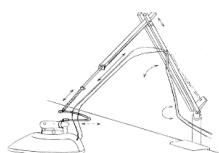

D06F 77/00

Arrangements for exerting pressure on, lifting, or guiding hand irons

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

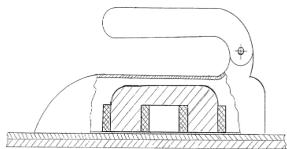

D06F 77/005

{using an electro-magnet or a permanent magnet in the iron or the ironing board}

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 79/00

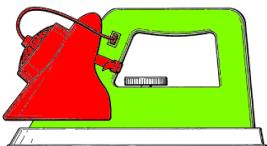

Accessories for hand irons

Definition statement

This place covers:

For instance: water containers for filling the iron.

Illustrative example of subject matter classified in this group.

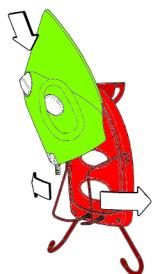

D06F 79/02

Stands or supports neither attached to, nor forming part of, the iron or ironing board

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

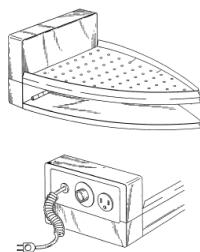

D06F 79/023

{with means for supplying current to the iron}

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

D06F 79/026

{for cordless irons}

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

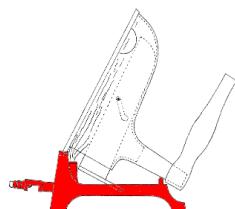

D06F 79/04

Stoves or other heating means specially adapted for heating irons externally

Definition statement

This place covers:

Illustrative example of subject matter classified in this group.

Hand irons with means for supplying steam to the article being ironed	D06F 75/10
Devices for creating permanent folds	A41H 43/00

Glossary of terms

In this place, the following terms or expressions are used with the meaning indicated:

Seam	generally formed by two pieces of cloth stitched and/or glued together
Fold	generally formed by folding a piece of cloth onto itself, such that a folding line is formed

D06F 89/005

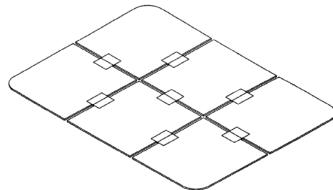

{Manual folding devices, e.g. for folding bed sheets ([D06F 89/02 takes precedence](#))}

Definition statement

This place covers:

Manual folding devices for any kind of household textiles with the exception of textile articles to be worn.

Illustrative example of subject matter classified in this group.

**D06F 89/02**

of textile articles to be worn, e.g. shirts

Definition statement

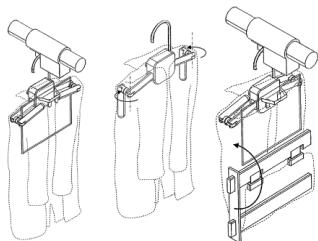

This place covers:

Manual folding devices for textile articles to be worn, with exception of shirts or parts thereof.

D06F 89/023

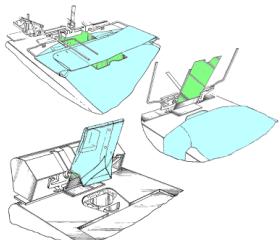

{of shirts}

Definition statement

This place covers:

Manual folding devices for shirts or parts thereof.

Illustrative example of subject matter classified in this group.

D06F 89/026

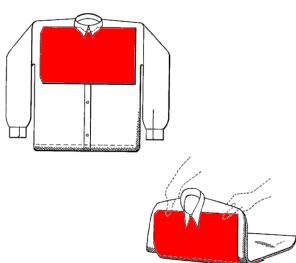

{Details, e.g. collar holders}

Definition statement

This place covers:

Collar holders for manual folding devices for shirts.

Illustrative example of subject matter classified in this group.

D06F 91/00

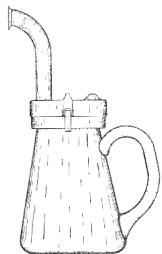

Starching apparatus

Definition statement

This place covers:

Manual devices for wetting clothes.

Illustrative example of subject matter classified in this group.

D06F 93/00

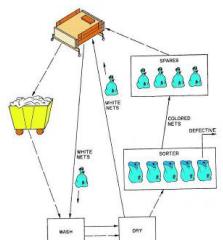

Counting, sorting, or marking arrangements specially adapted for laundry purposes

Definition statement

This place covers:

Industrial clothes counting or sorting arrangements.

Illustrative example of subject matter classified in this group.

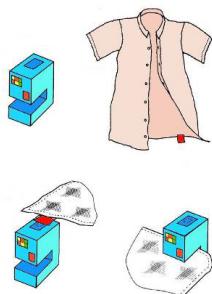

D06F 93/005

{Marking arrangements}

Definition statement

This place covers:

Marks as well as marking arrangements.
